

CEMENT · 17 MTPA PRODUCER

One cement plant. 15 systems, each holding its own data.

What changed when Faclon connected them?

Three moves. Three numbers. One plant that now runs on AI. Swipe to see how.

QUICK POLL BEFORE YOU SWIPE

How many systems hold your plant's data today?

A 1 to 5

B 6 to 10

C More than 10

D Honestly, we've lost count

Drop your letter in the comments. This plant was a C.

MOVE 1 · CONNECT

15+ systems. One live view.

Different vendors, different formats, one screen. Even the paper logbooks went digital.

Next: decisions, 5× faster

SWIPE →

MOVE 2 · DECIDE

5× faster decisions.

BEFORE — TIME TO GET THE NUMBERS

Hours

WITH FACLON

Minutes

14
dashboards on the same live data

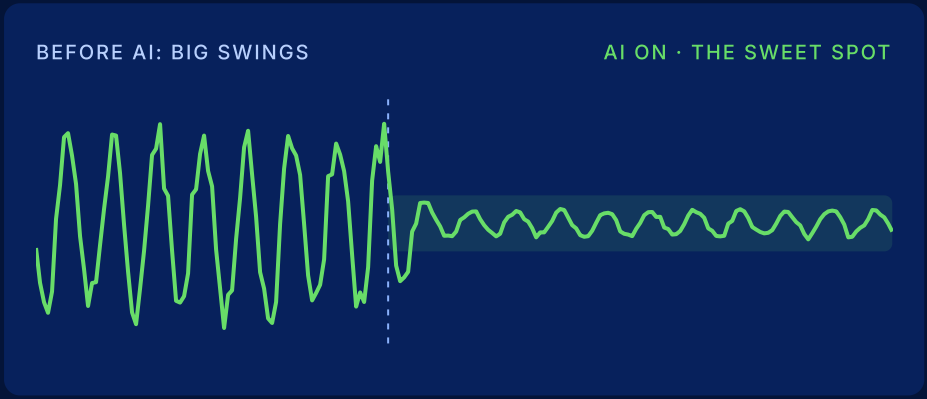

1
version of the truth, control room to plant head

Next: letting AI tune the kiln and mill

SWIPE →

MOVE 3 · OPTIMISE

15% less energy per tonne.*

AI found the most efficient operating range for the kiln and the grinding mill, then held the plant there.

*Specific energy consumption (SEC): energy used per tonne of cement.

Next: the full scorecard

SWIPE →

THE RESULT

One plant. Four numbers that moved.

VISIBILITY

15+

systems on one screen

QUALITY

↓8%

quality deviations

ENERGY

↓15%

energy use (SEC)

EMISSIONS

↓10%

CO_2 emissions

Which number matters most to you? Tell us below.

Every factory will run on AI. The only question is whose.
