

Every factory will run on AI. Faclon makes it deployable.

Industrial AI that goes live in weeks on the machines a plant already has.

 400+ factories live

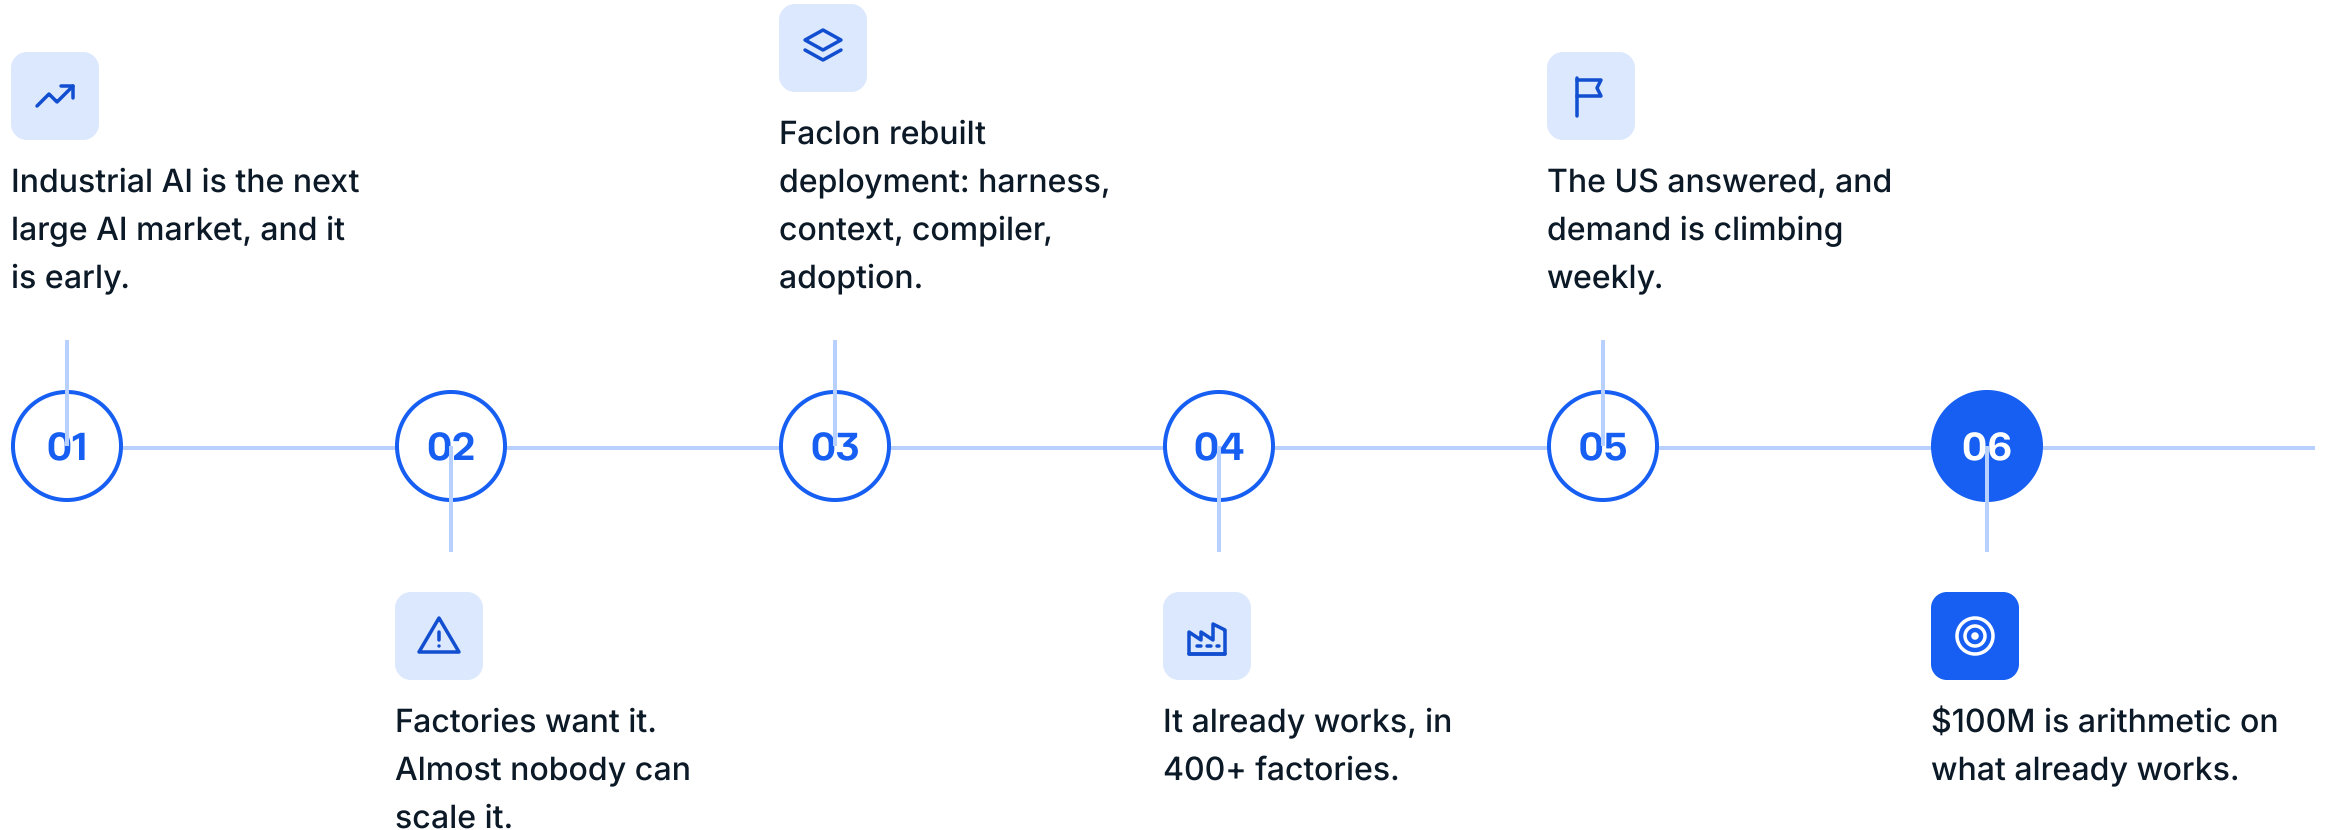

United States

India

Middle East

What you will know in **three minutes**.

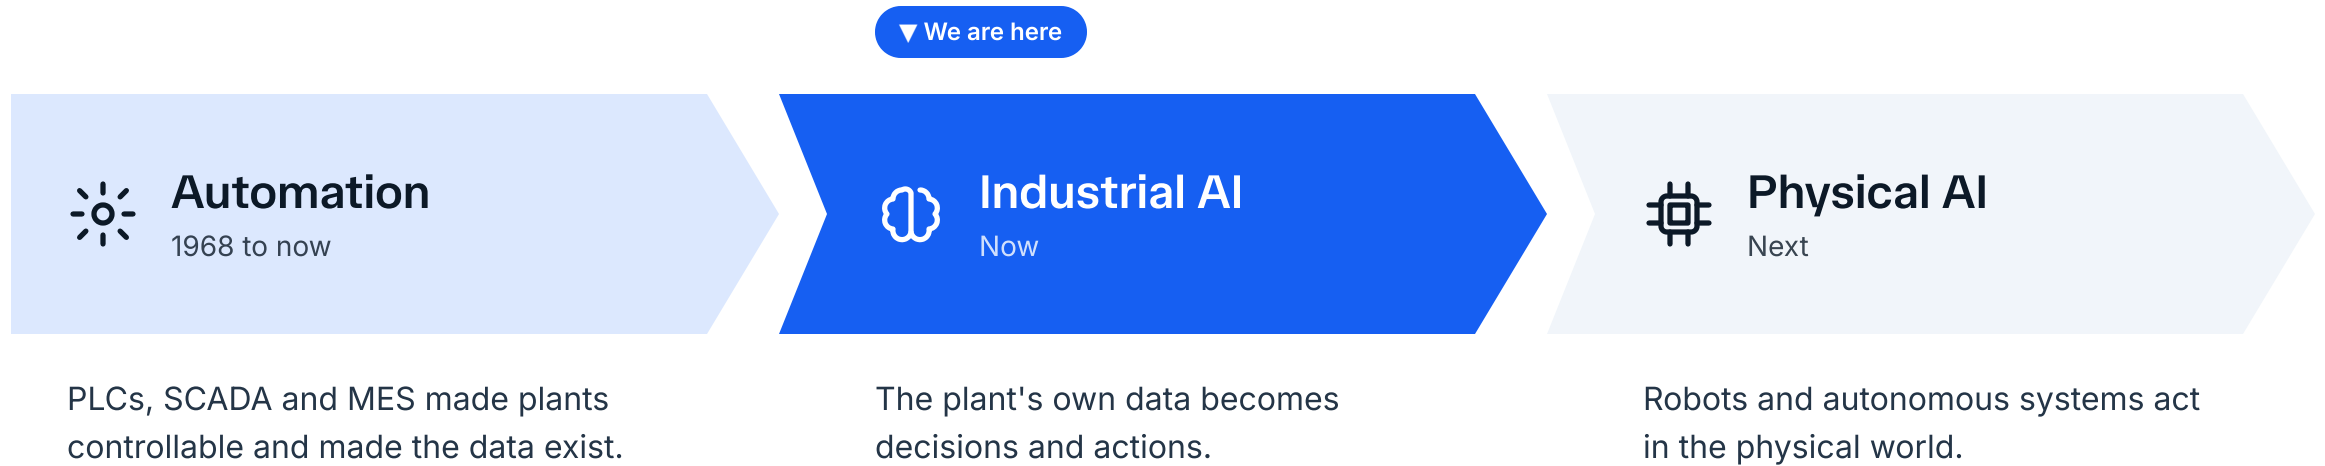

PART 1 OF 7 · INDUSTRIAL AI IS INEVITABLE

Industrial AI is the next large AI **market.**

The world is saying this, not Faclon.

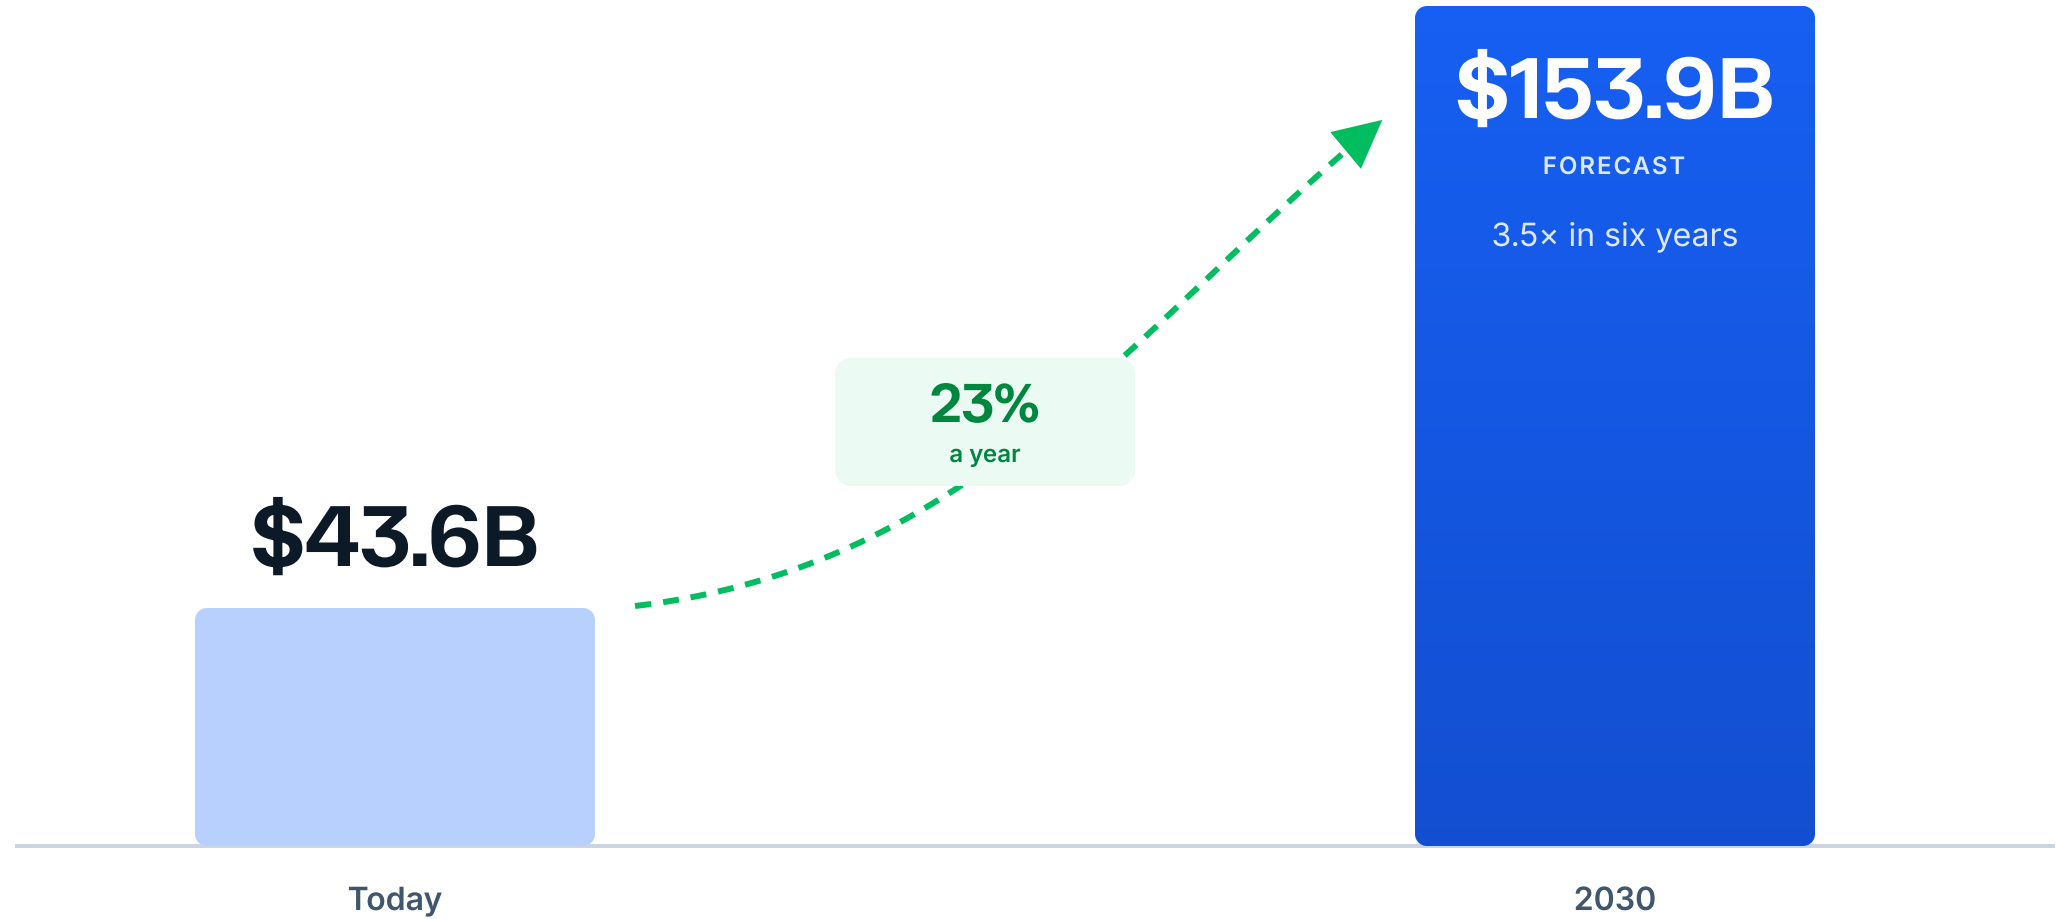

01

Three eras, and we are at the start of **the second**.

 Robots will need a plant that already understands itself.

\$43.6B today. **\$153.9B** by 2030.

And it is still **0.1%** of what manufacturers earn.

Each dot is \$1 of manufacturer revenue. One of them goes to industrial AI.

\$40K

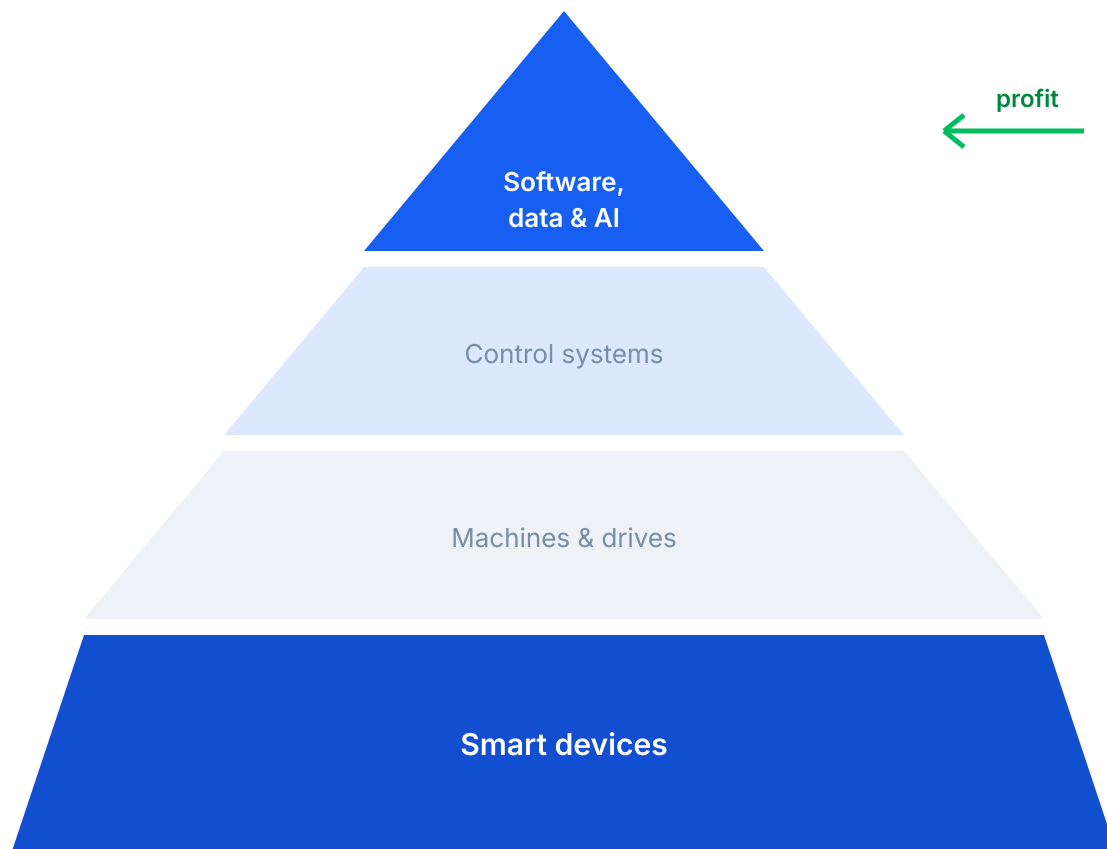

spent by each US manufacturer on industrial AI in 2024

~3%

of their R&D spend

⚔ This is the first innings.

Value is moving from the machine to **the intelligence**.

Automation pyramid · by 2030

~1/2

of industrial automation revenue will rely on **AI-enabled offerings** by 2030.

80%+

of profit pools shift to software, data and AI at the top and smart devices at the bottom.

“

“No longer a differentiator. A prerequisite for market access.”

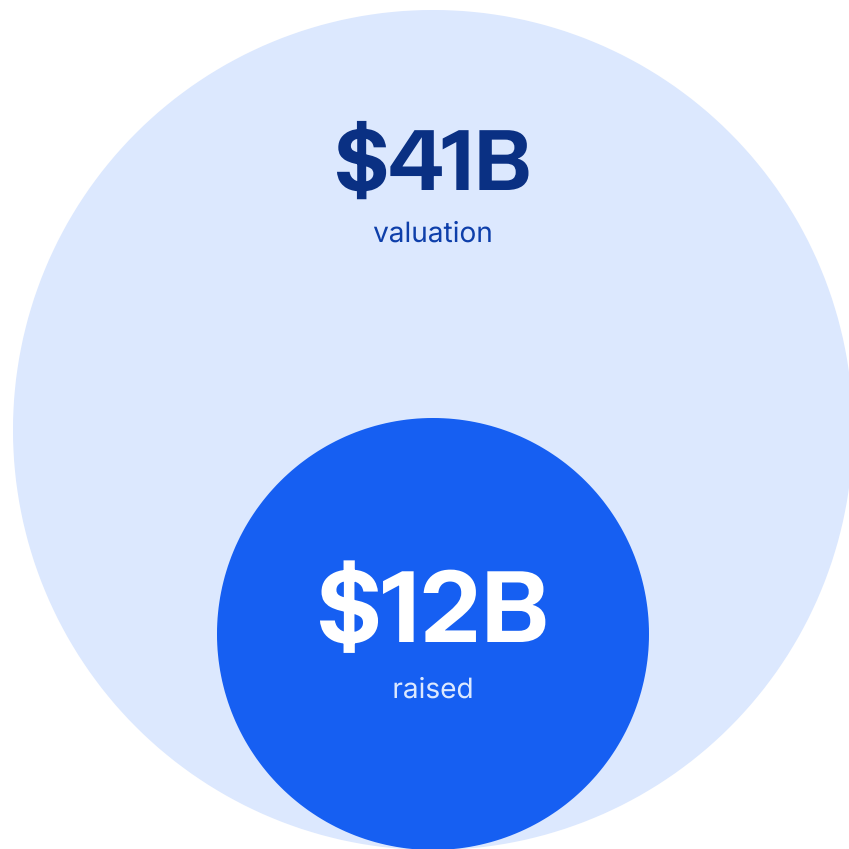

BAIN & COMPANY

Bain & Company, April 2026, on AI in several core industrial use cases

The smartest money is paying software prices for it.

Closed		\$10B	~15× revenue
Siemens + Altair			
Closed		\$3.6B	~27× forward ARR
Autodesk + MaintainX			
Announced		\$3.1B	~18×
Schneider Electric + Cognite			
Built		\$300M+	revenue, from GE Vernova's and PTC's industrial software
TPG built Velotic			

And the largest new bet in the category is **\$12B**.

Prometheus

Raised to build AI for engineering and manufacturing.

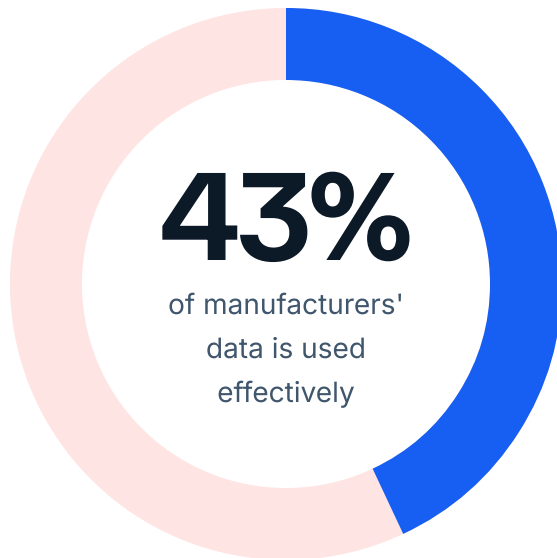

BACKED BY

JPMorgan

BlackRock

Goldman Sachs

The constraint is **the data**, not the model.

■ Used effectively · 43%

■ Left on the table · 57%

“There is no ‘internet of manufacturing data’ to train on.”

Prometheus, to Axios

🗄️ **Whoever makes plant data usable owns the layer everything else runs on.**

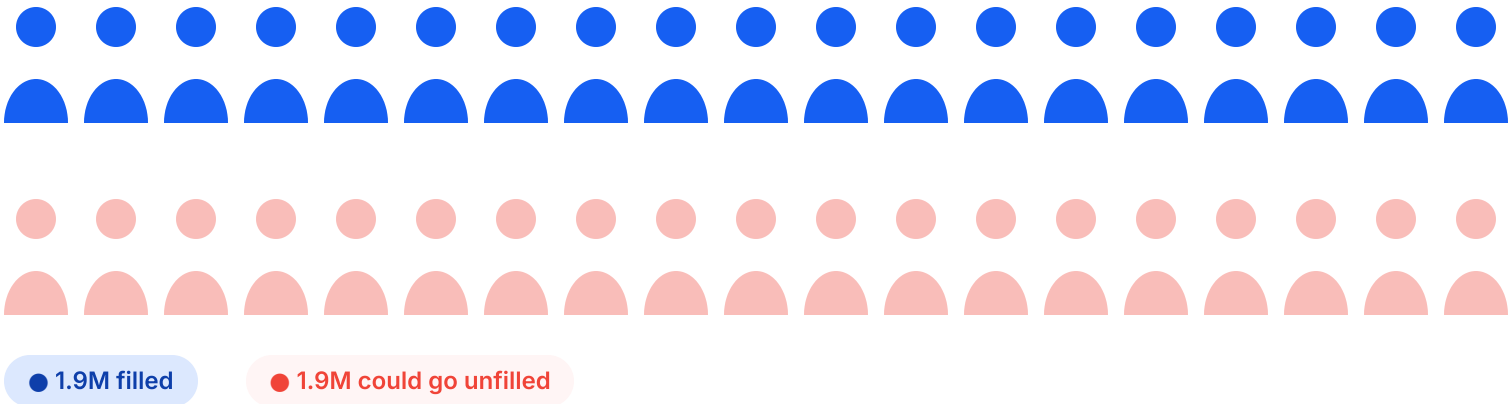

“

“I'm more excited about industrial AI than physical AI. I have a **very optimistic view** on the industry.”

SCHNEIDER ELECTRIC

Investor, Schneider Electric's venture fund

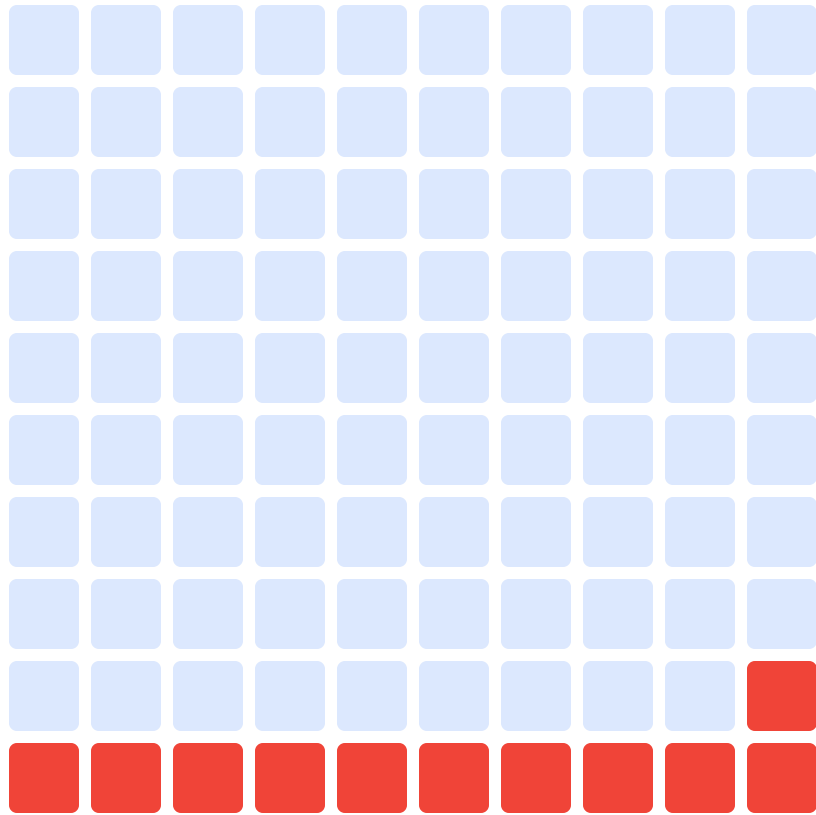

The people who run the plants are disappearing.

1.9M of the **3.8M** US manufacturing jobs needed by 2033 could go unfilled.

Downtime costs the world's largest companies **\$1.4 trillion** a year.

\$1.4T

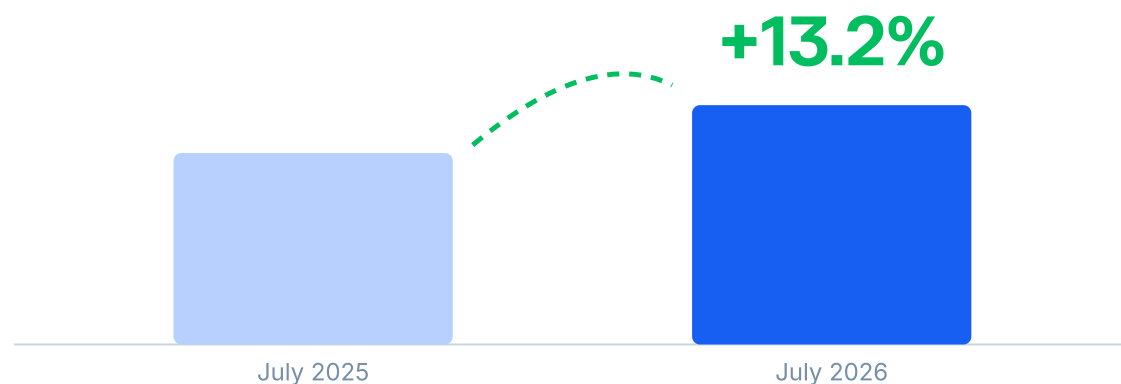

lost to unplanned downtime every year.

~11% of revenue for the Global 500. Each red square is 1% of revenue.

US plants are not being built. They are being **equipped**.

US core capital goods orders

Growth year on year. Bar heights illustrative of the change.

100%

first-year expensing of equipment is now **permanent**.

“

“With the re-industrialization, manufacturing being brought more in house, there's a lot of **pretty good tailwinds.**”

INSIGHT PARTNERS

Partner, Insight Partners

Where it is done properly, it **already pays**.

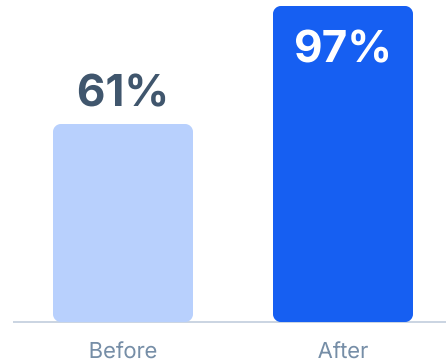

☆ The 2025 World Economic Forum Lighthouse cohort

Bar length shows size of improvement. Every direction is better.

And it works in **American plants** too.

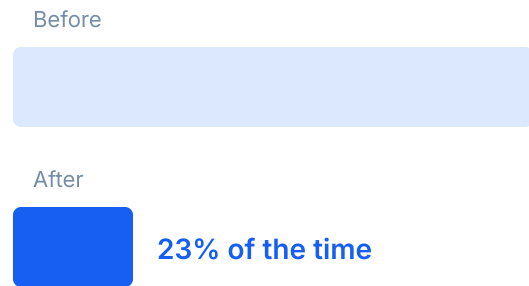

SCHNEIDER ELECTRIC · EL PASO

61% → 97%

On-time delivery

HITACHI VANTARA · NORMAN

-77%

Order-to-ship lead time

SAUDI ARAMCO · HAWIYAH

+44%

Overall equipment effectiveness

We have seen this before, with **electricity**.

Factories had electric motors from the 1880s, but productivity only took off once the factory was **redesigned around them**.

⚡ The technology is here. The redesign is what is starting now.

PART 2 OF 7 · WHY ALMOST NOBODY HAS SCALED IT

The market is huge. Almost nobody has **scaled it**.

Factories want industrial AI. Deployment has been too custom, too slow and too expensive.

02

84% see value. **20%** are at scale.

See measurable value

© The gap between those two bars is the market.

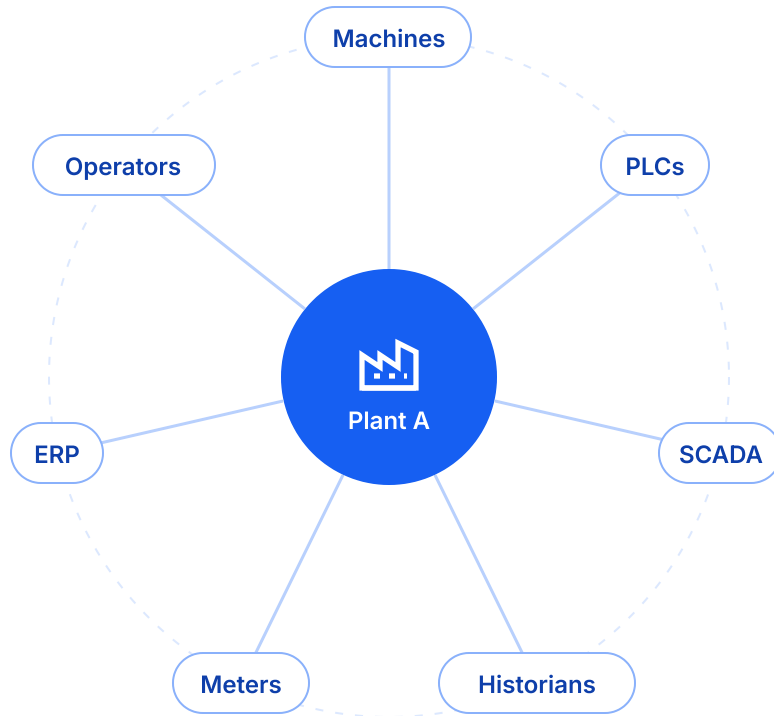

“

“...No one is at the scale, **everyone is at the pilot,**
and the pilot hasn't shown a single value yet.”

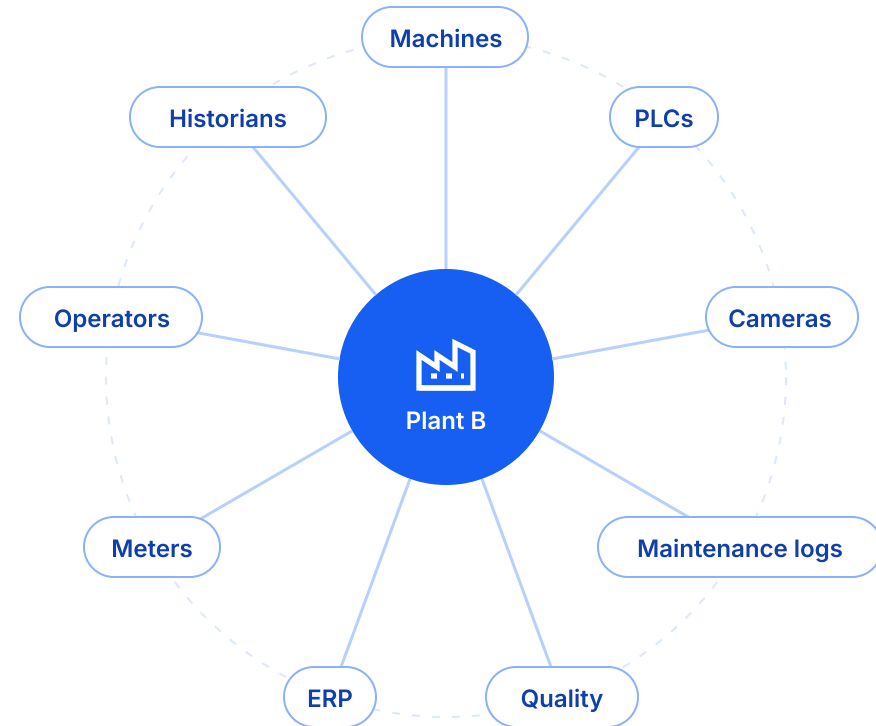

PWC STRATEGY&

Director, PwC Strategy&

Every factory is **different**.

≠

 No two plants are alike, even inside one company.

Six problems, in **every** plant.

Energy leaks nobody sees

Hidden capacity

Unplanned downtime

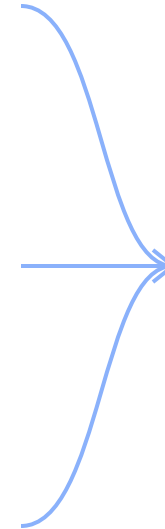

Defects caught late

Data trapped in silos

Decisions on yesterday's data

Every one of them is
now an AI problem.

The pilot works. The **tenth plant** gets cancelled.

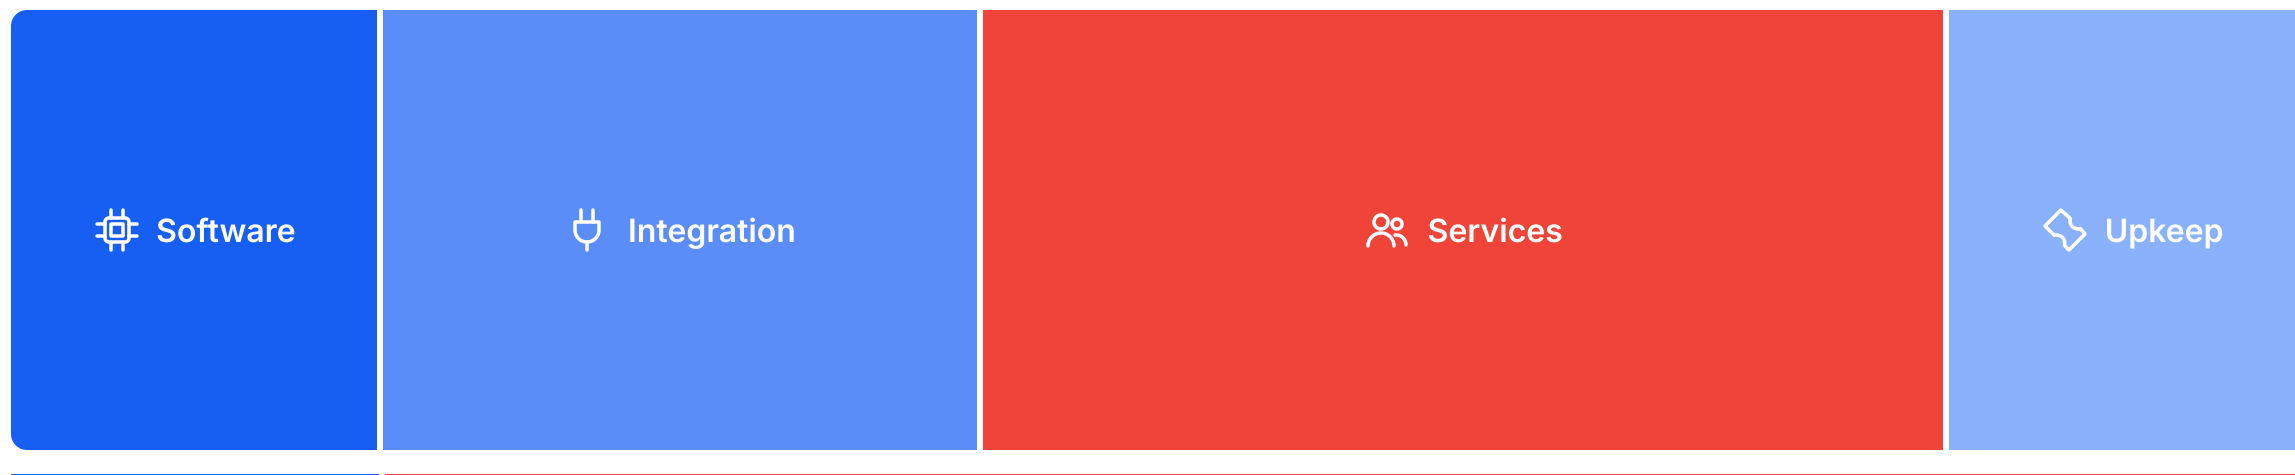

Illustrative

The parts are cheap. The plumbing is not.

Total cost of a traditional industrial AI deployment

Illustrative

The part people budget for Plumbing: connecting, customising, and keeping it alive

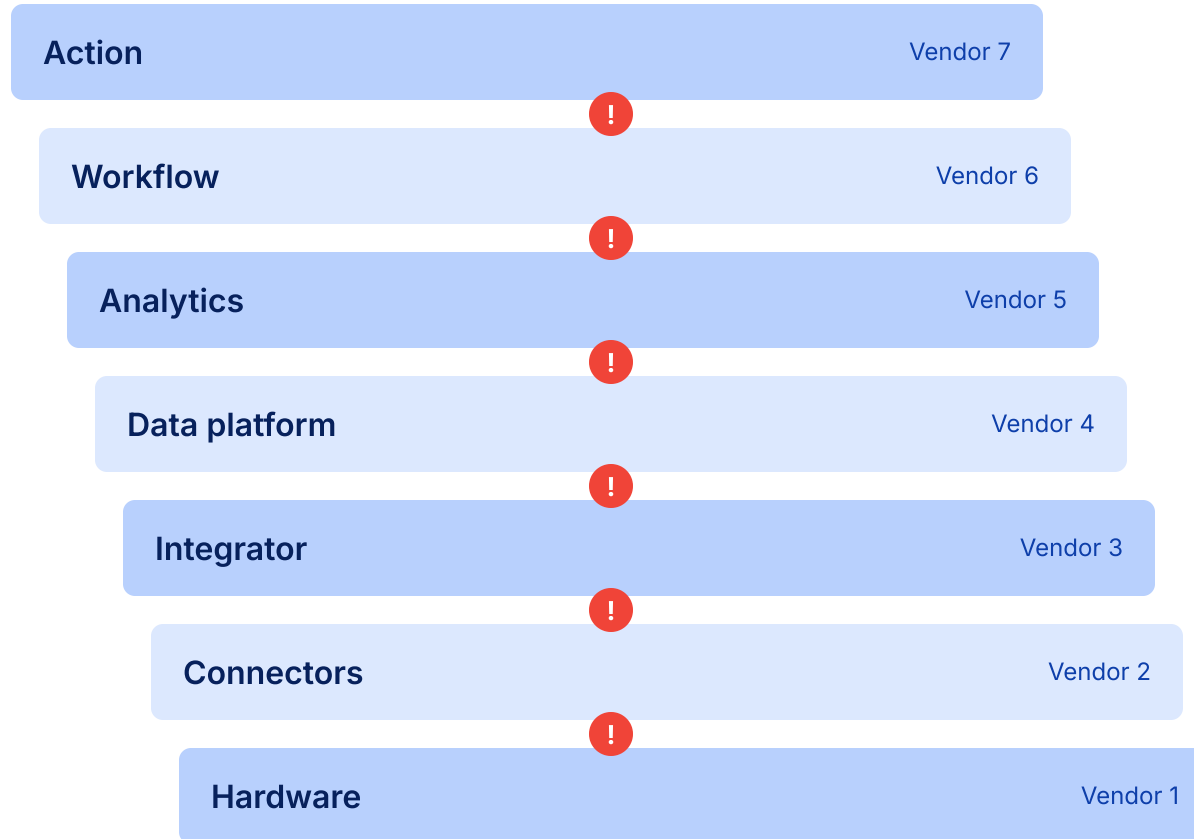

Services eat the return.

Every plant starts from zero, so none of that cost is reused.

The old model made the customer **assemble the stack**.

! = a joint the customer owns

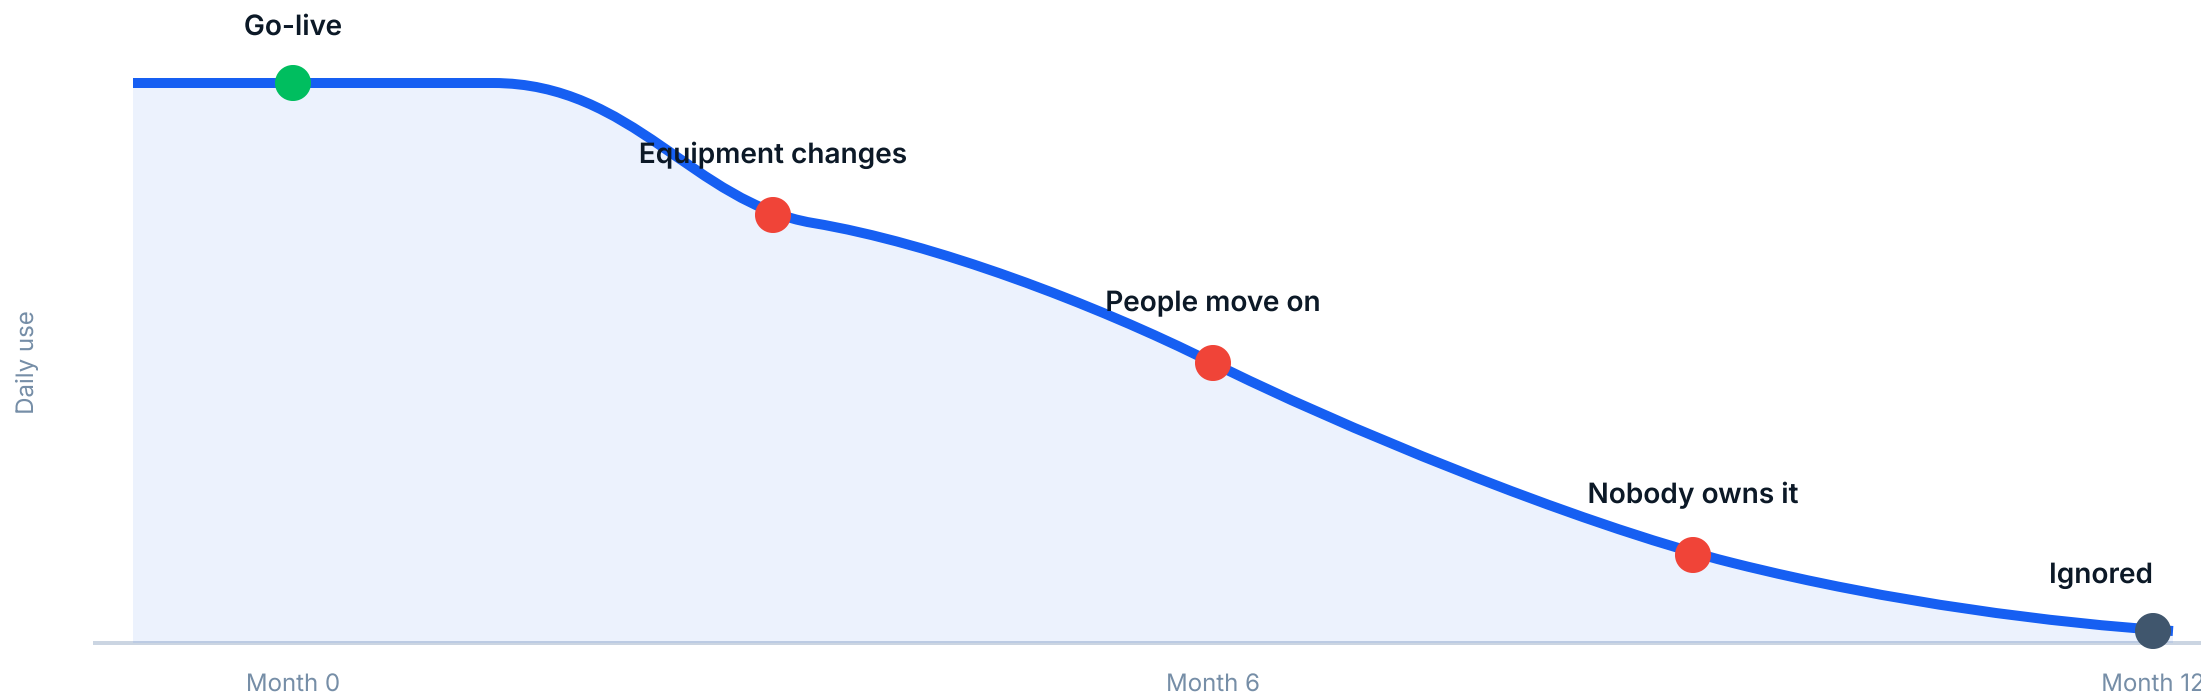

6

hand-offs between seven vendors, before any value.

Every joint was the customer's problem, and months passed before any value.

And what goes live often **dies quietly.**

⚠ A dead pilot is the industry's default outcome.

The incumbents **cannot** fix this.

01

Big platforms

Need \$1M-plus projects to make money.

✗ Cannot fix it

02

Integrators

Earn from the very services that need automating.

✗ Cannot fix it

03

Point tools

Never add up to a system.

✗ Cannot fix it

“

“They develop their solutions for the big global Fortune 1000 and then they try to scale them down. **And it doesn't work.**”

ICR GROUP

Former manufacturing company president, ICR Group

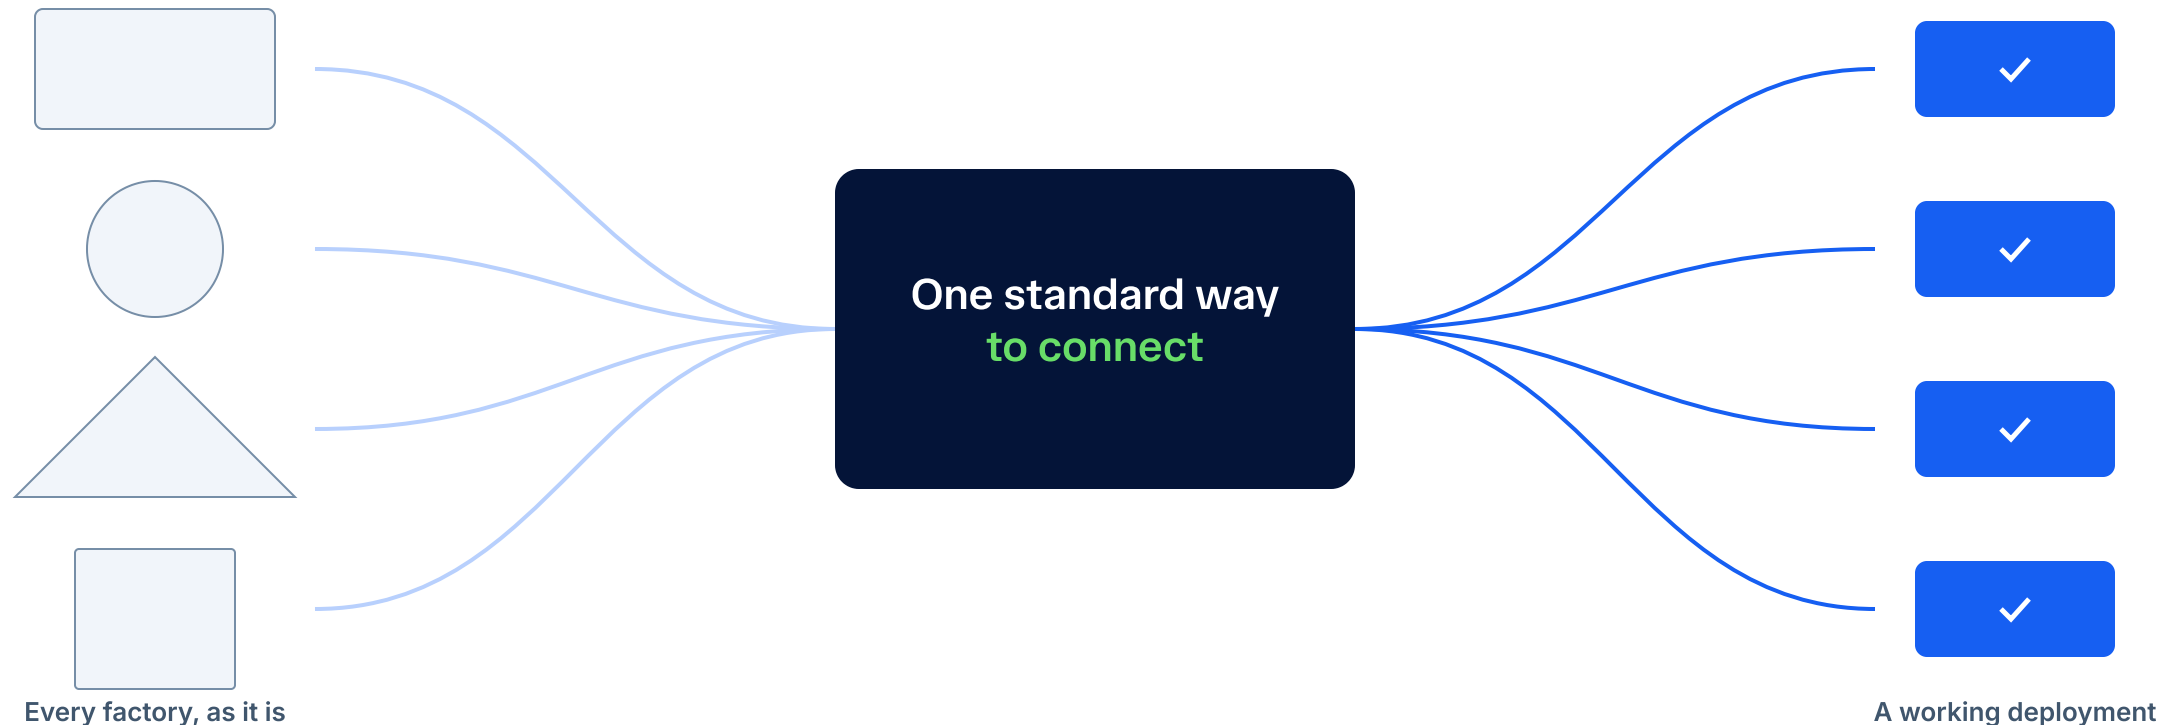

PART 3 OF 7 · WHAT FACLON REBUILT

So we rebuilt how industrial AI gets **deployed**.

Four parts: harness, context, compiler and adoption.

03

We did not standardise the factory. We standardised **how any factory gets connected**.

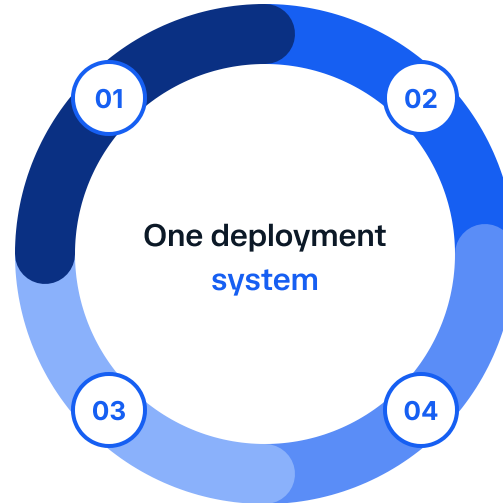

📅 Five years building every connector, template and tool, before agents could use them.

Four things, and they **only work together.**

01 **Harness**
The plumbing.

Context **02**
What 400+ factories taught us.

03 **Compiler**
Our AI assembling the deployment.

Adoption **04**
Staying until the plant uses it.

One: **the harness.**

100+

Proprietary connectors

~640

Endpoints an AI agent can call

600+

Industrial AI skills

AI agent

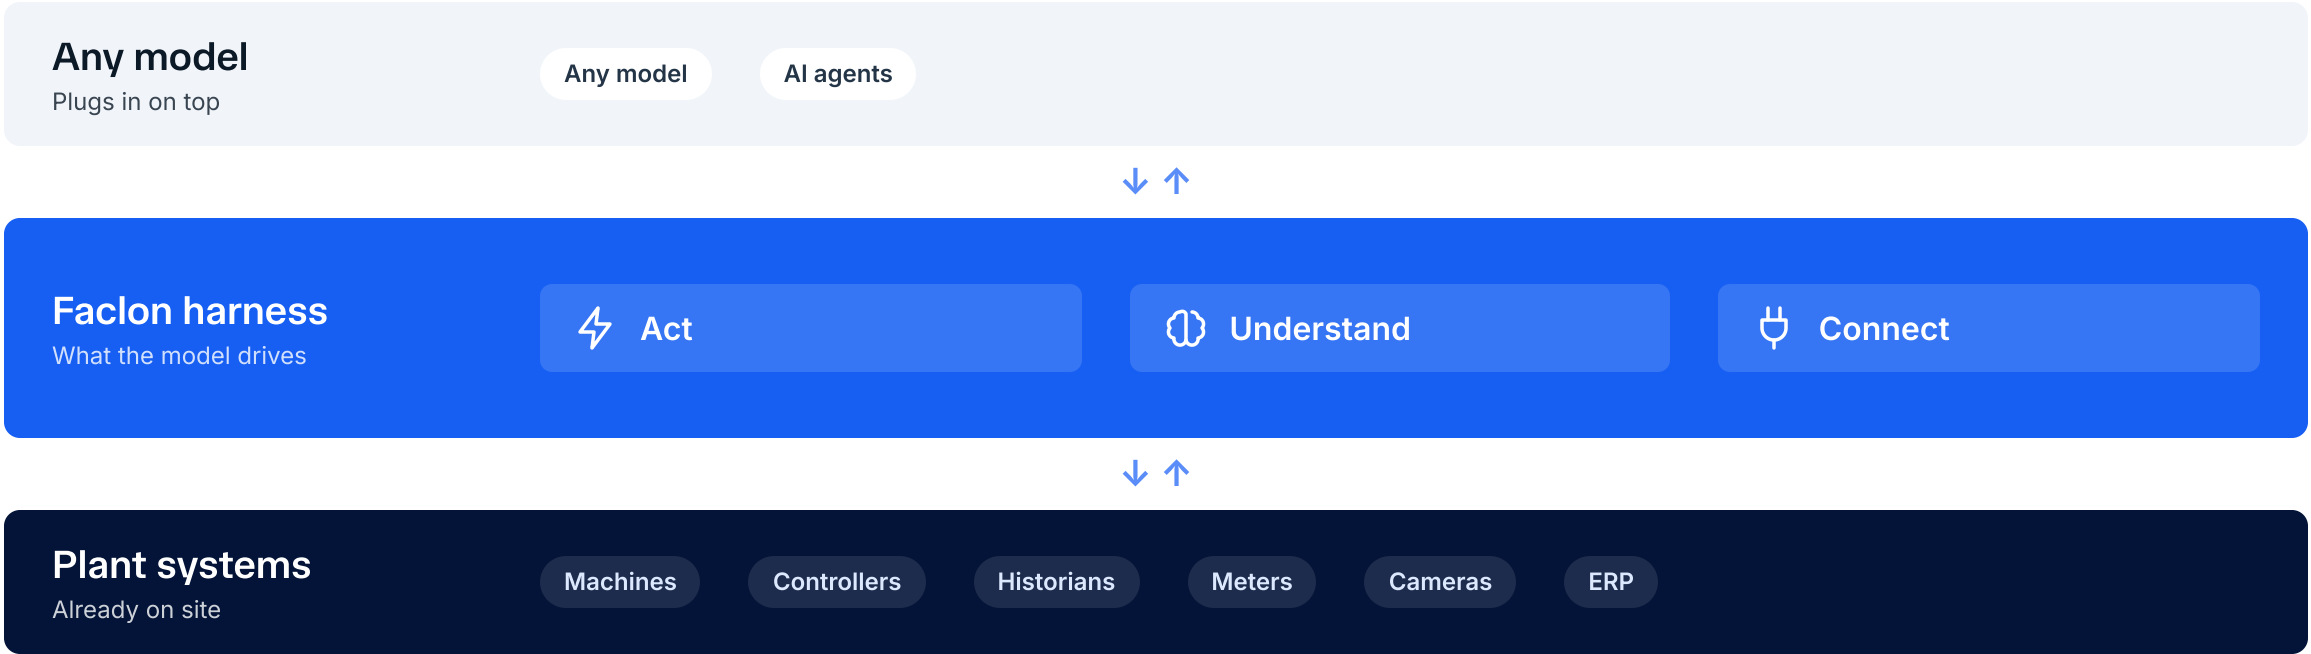

Tools

Builds the deployment

Agents help build, not just read the data.

Any model plugs in. The harness is what it drives.

“

“That has been a traditional stumbling block for these projects. Just simply connect to the data has often been a large portion of the timeline. **Impressive.**”

TD SYNEX

Senior executive, TD SYNEX

Two: the context.

400+

Factories

120K+

Assets

10B+

Data points a day

Built in Asia's hardest plants, across:

Metals

Cement

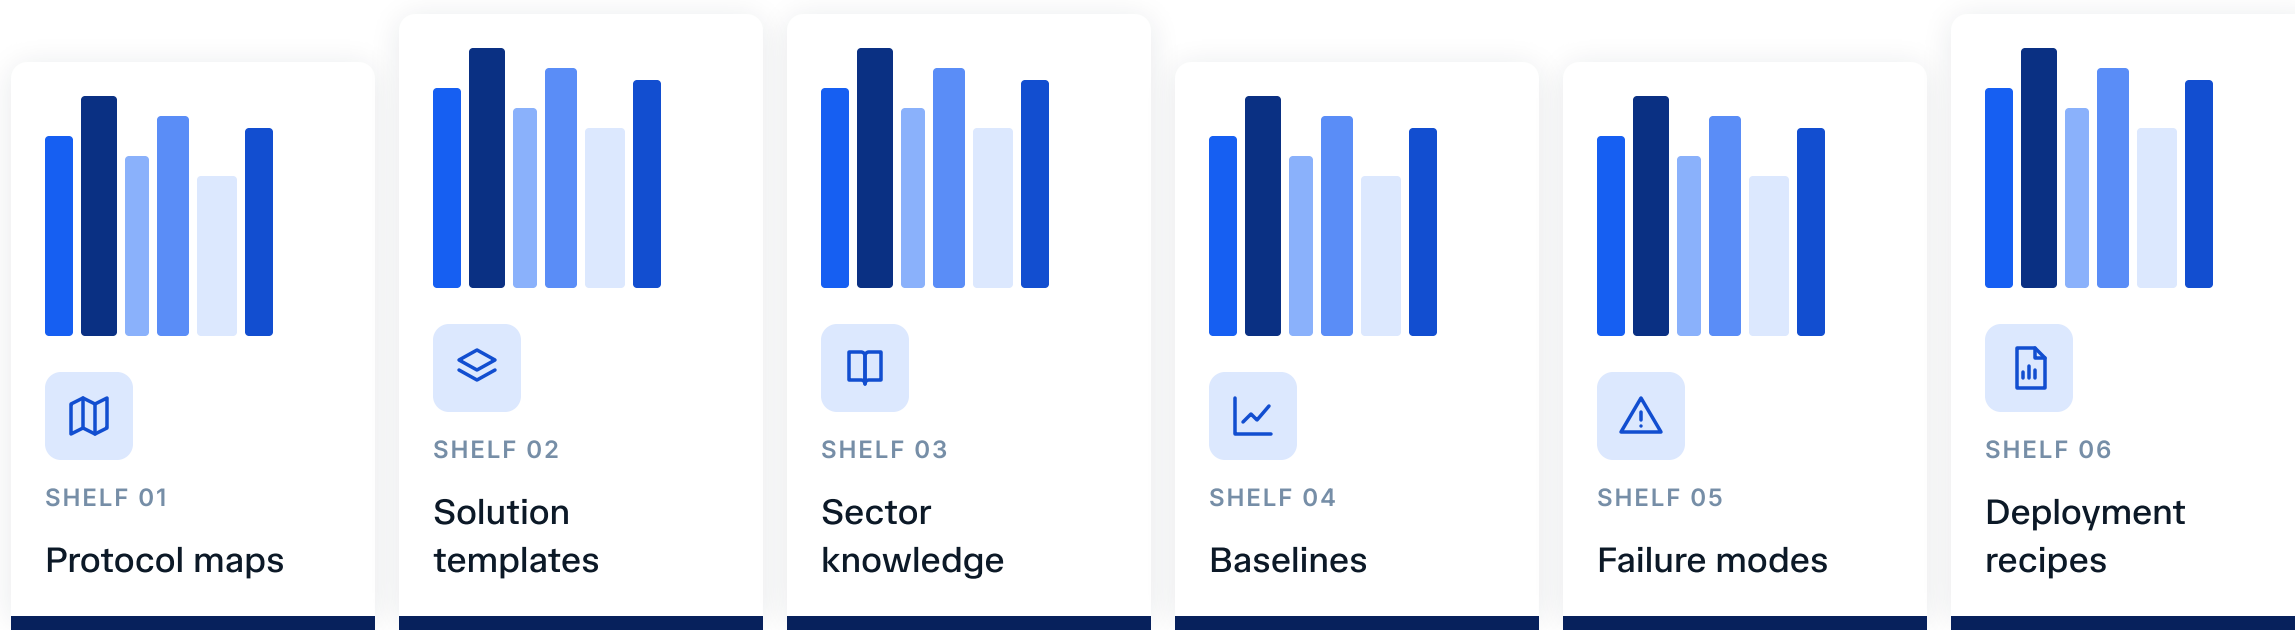

Chemicals

Pharma

Food

Infrastructure

Five years of answers, **filed** so software can use them.

Reusable industrial know-how **compounds**.

Each customer's own data **stays with that customer**.

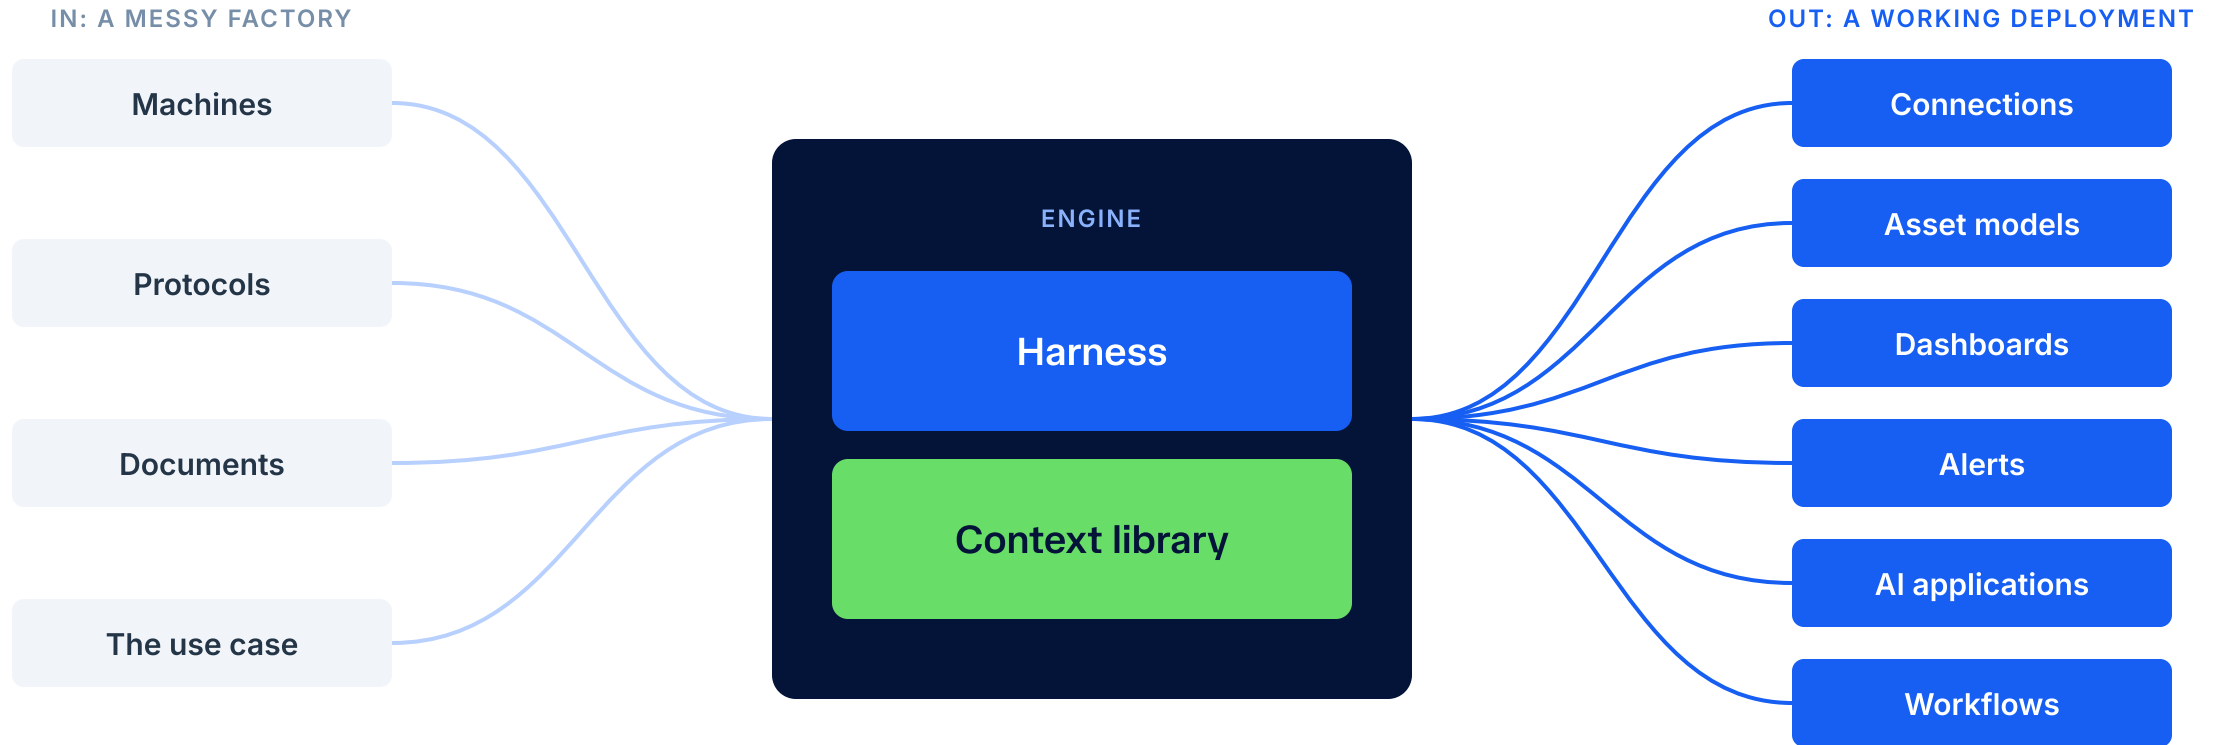

“

“If you're combining the experience you have from a large number of customers, that may give you **much better insight** as to the behavior of the underlying equipment.”

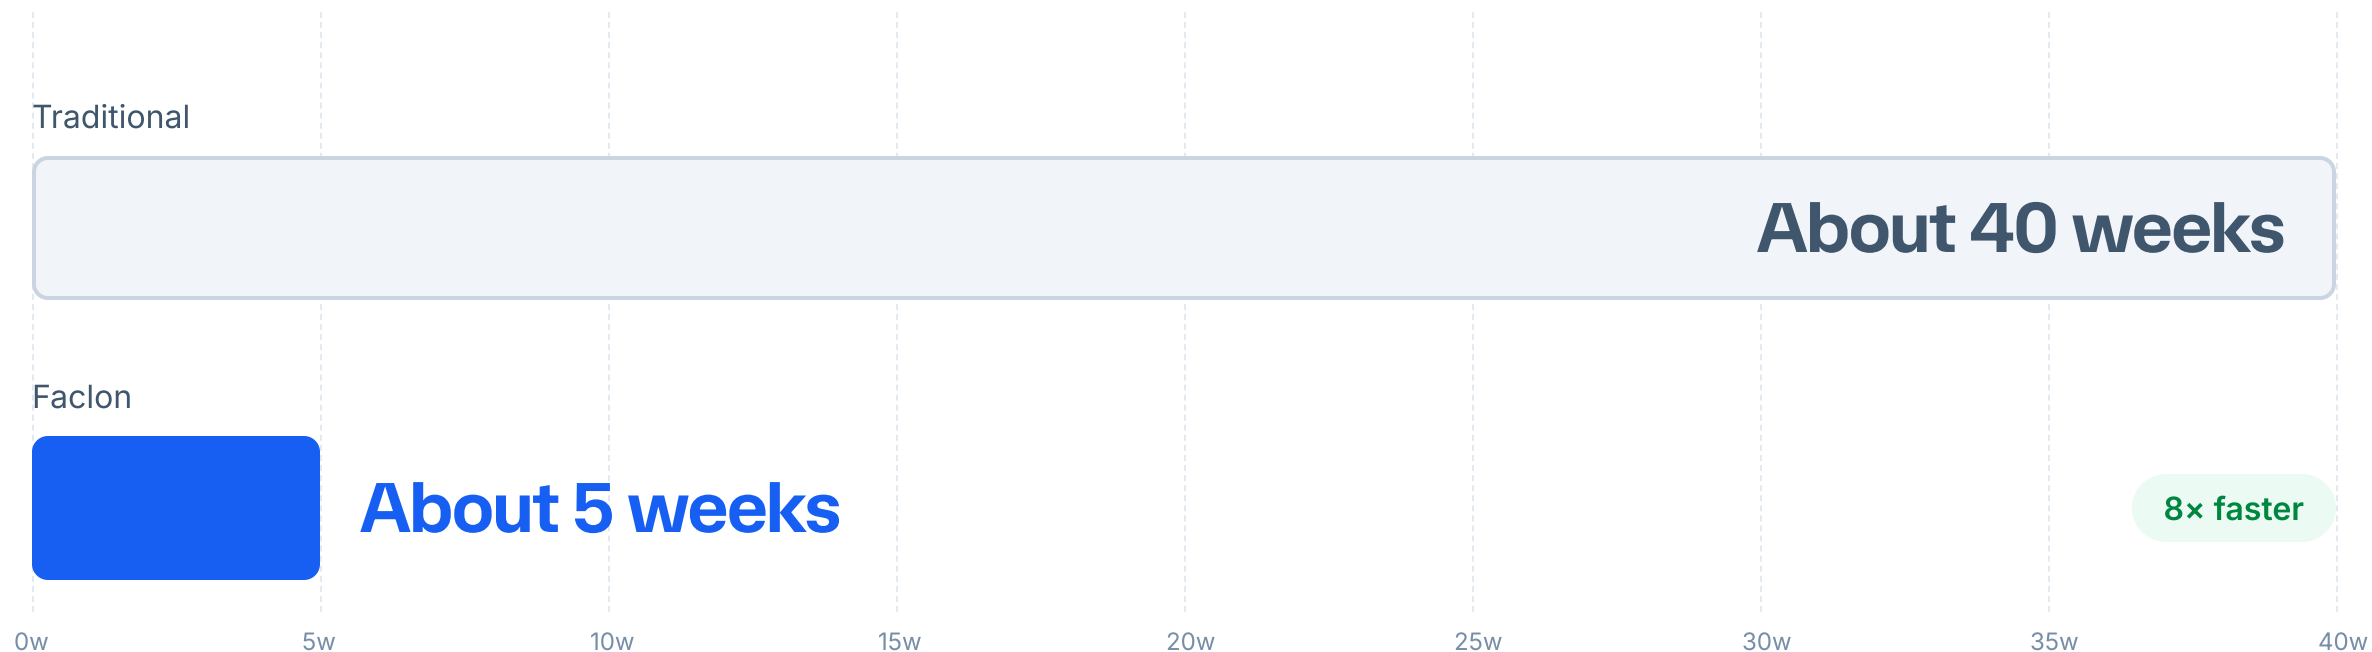

TD SYNEX

Senior executive, TD SYNEX

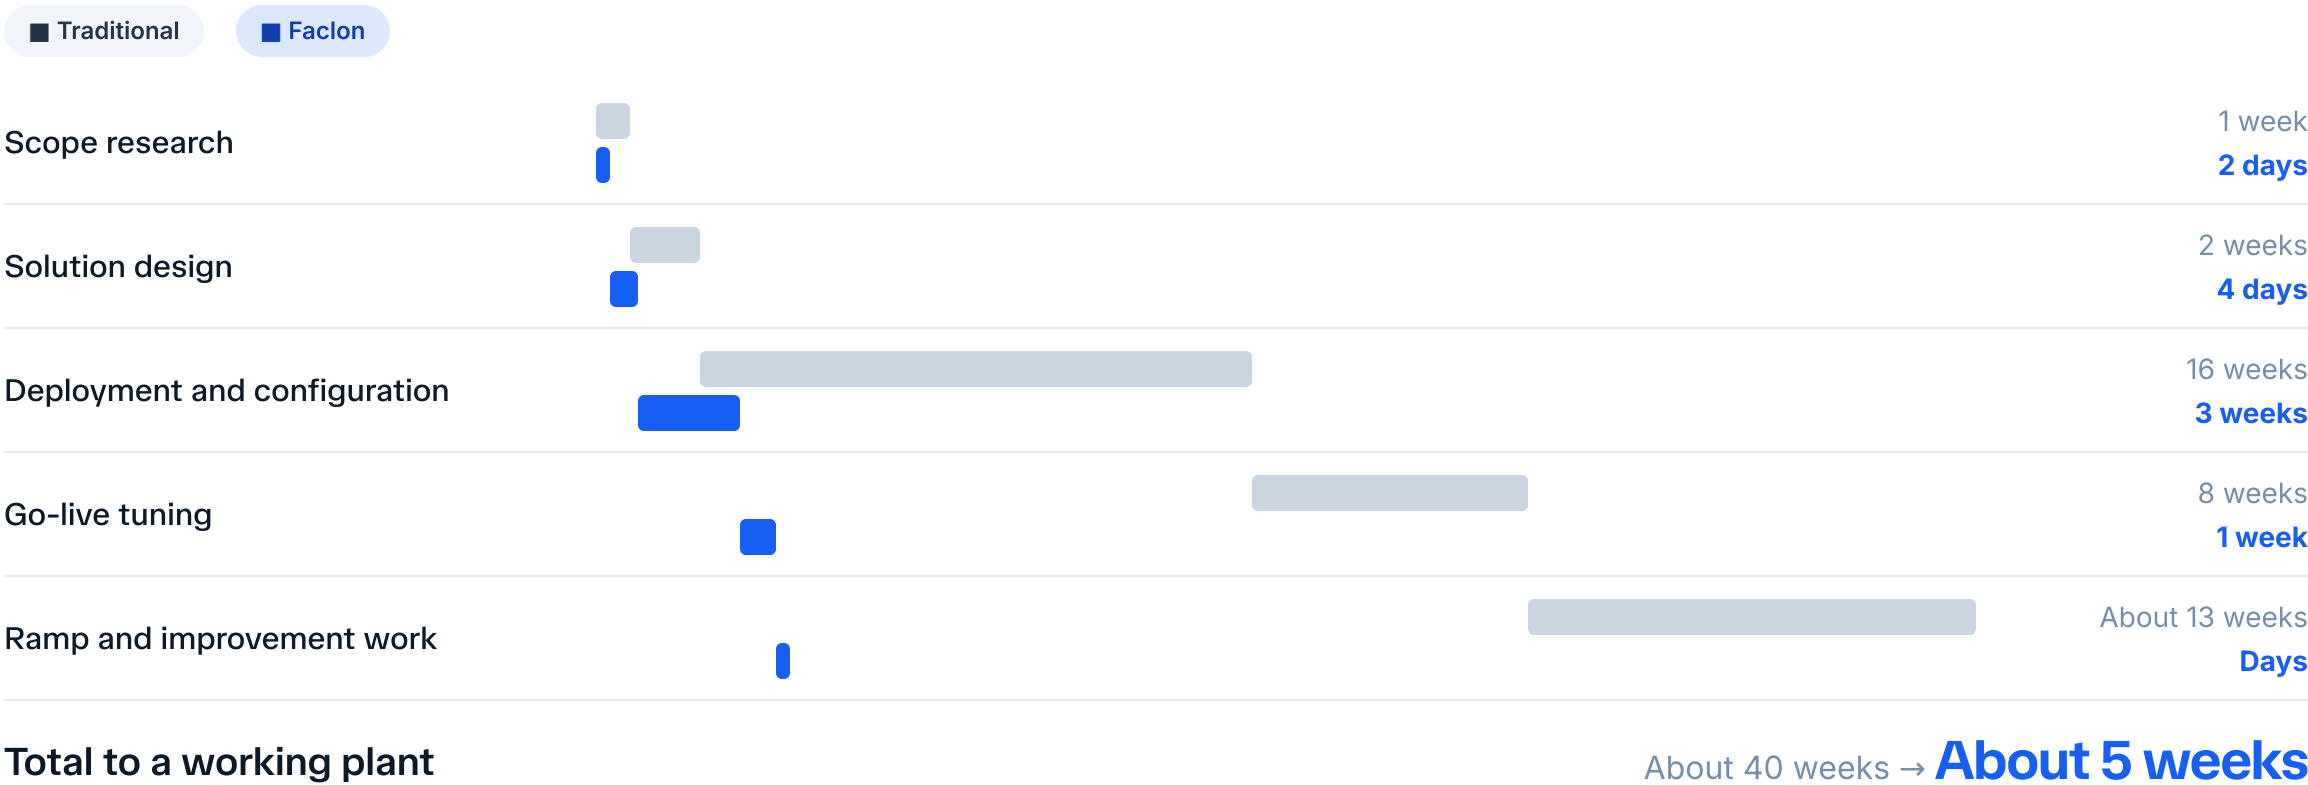

Three: the compiler.

A 40-week project now goes live in **about five**.

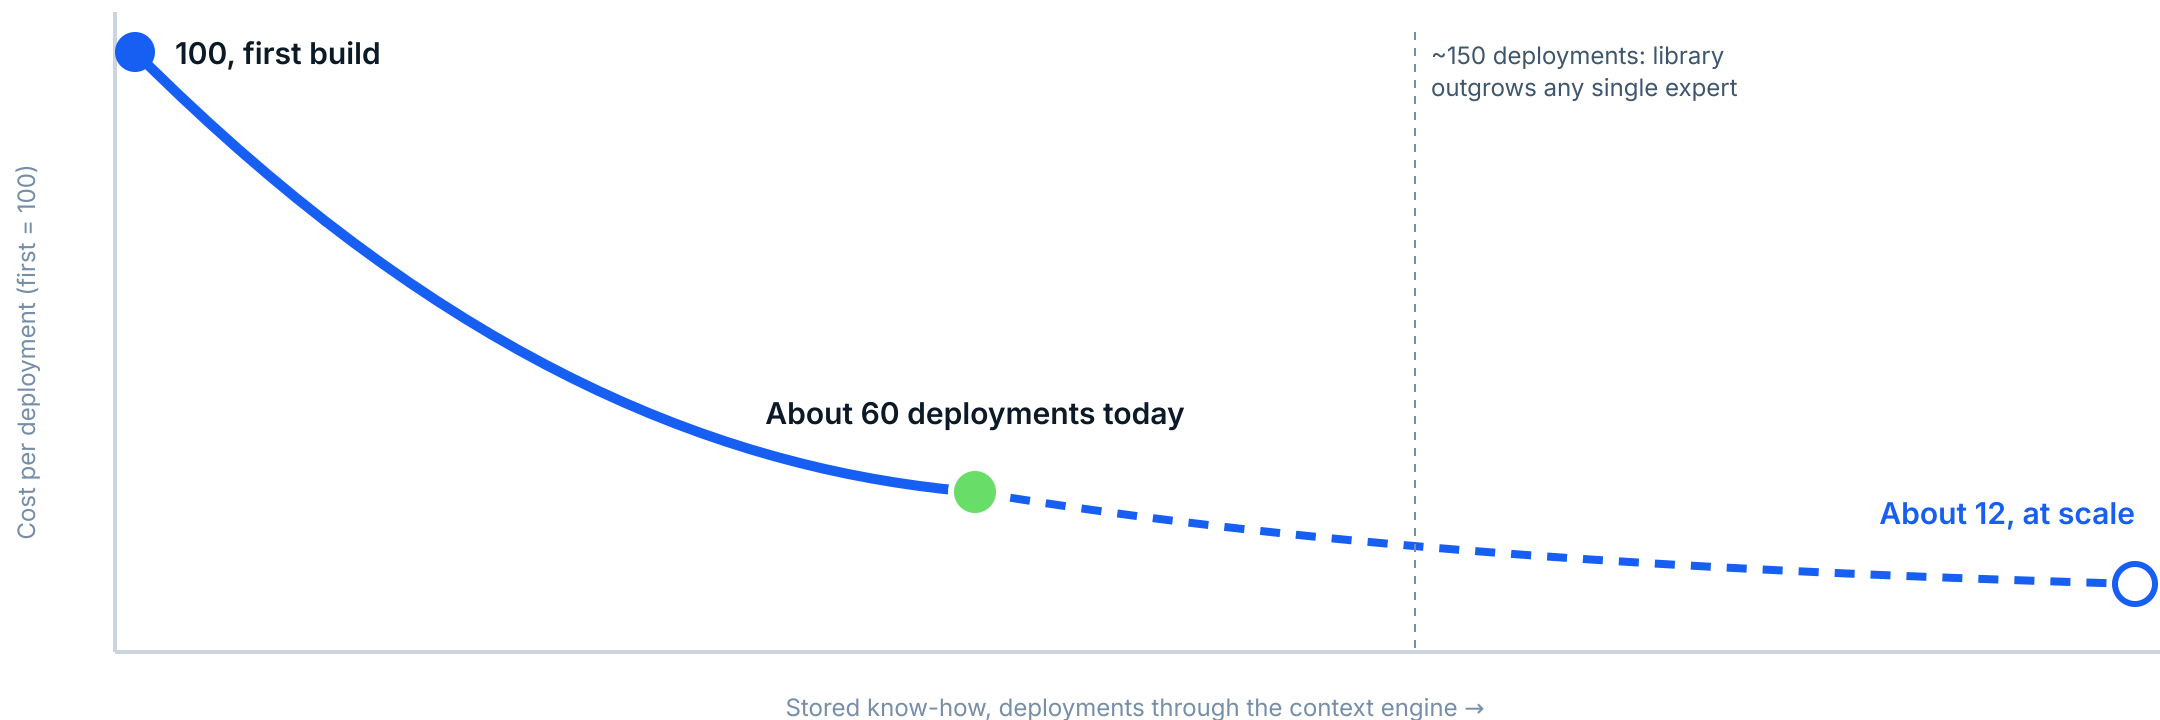

Every stage gets faster.

And every plant makes **the next one cheaper.**

Deploy → Learn → Reuse → **Deploy faster**

Projected

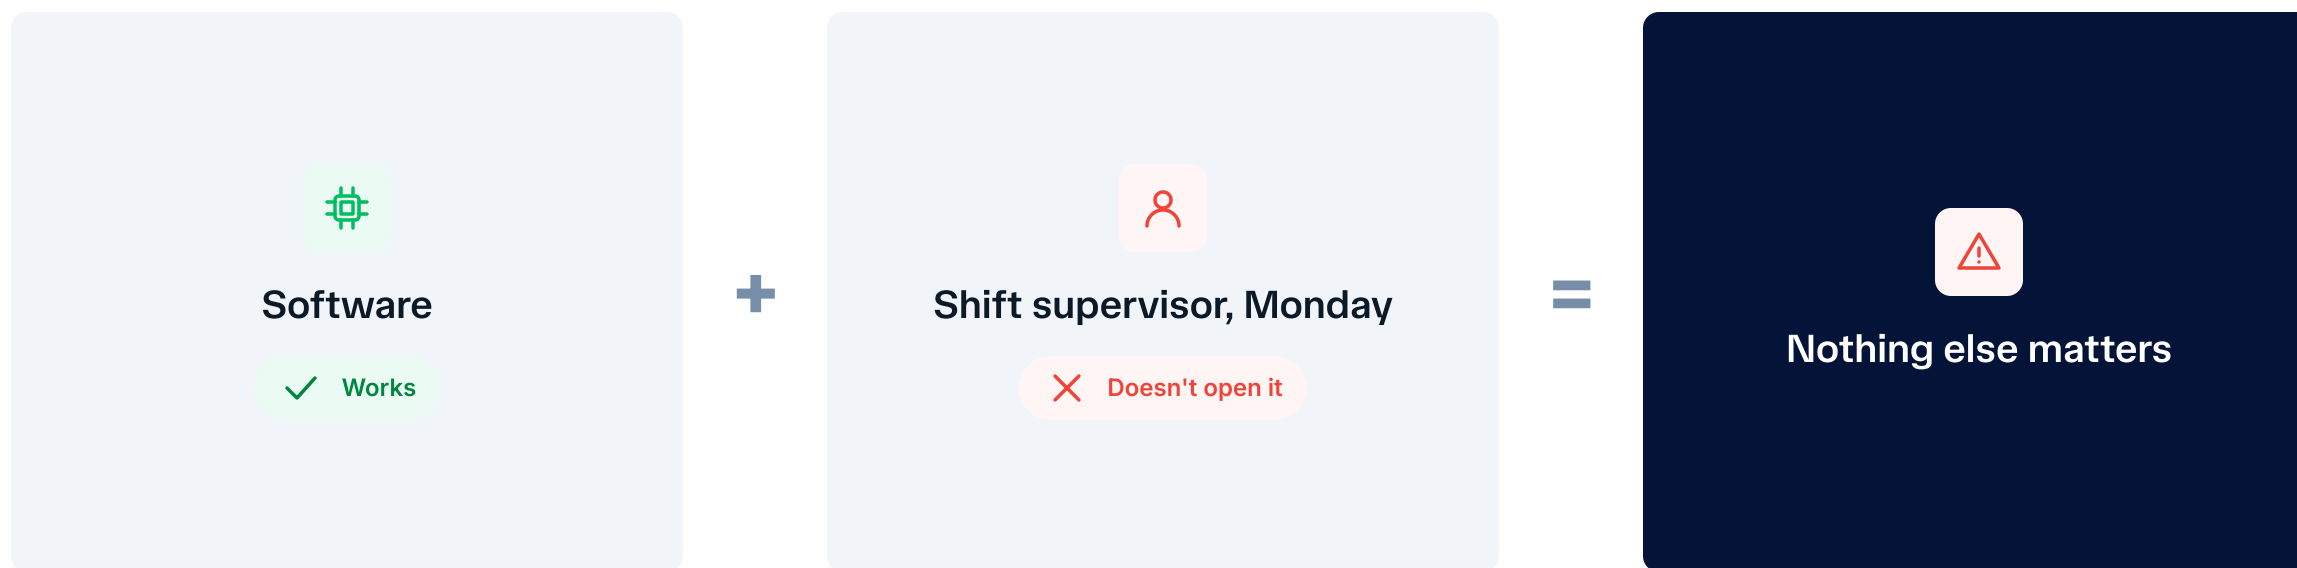

“

“Everybody in the industrial space is looking to deploy AI. The fact that your AI learns from it and deploys it across your customers, I think **it's pretty powerful.**”

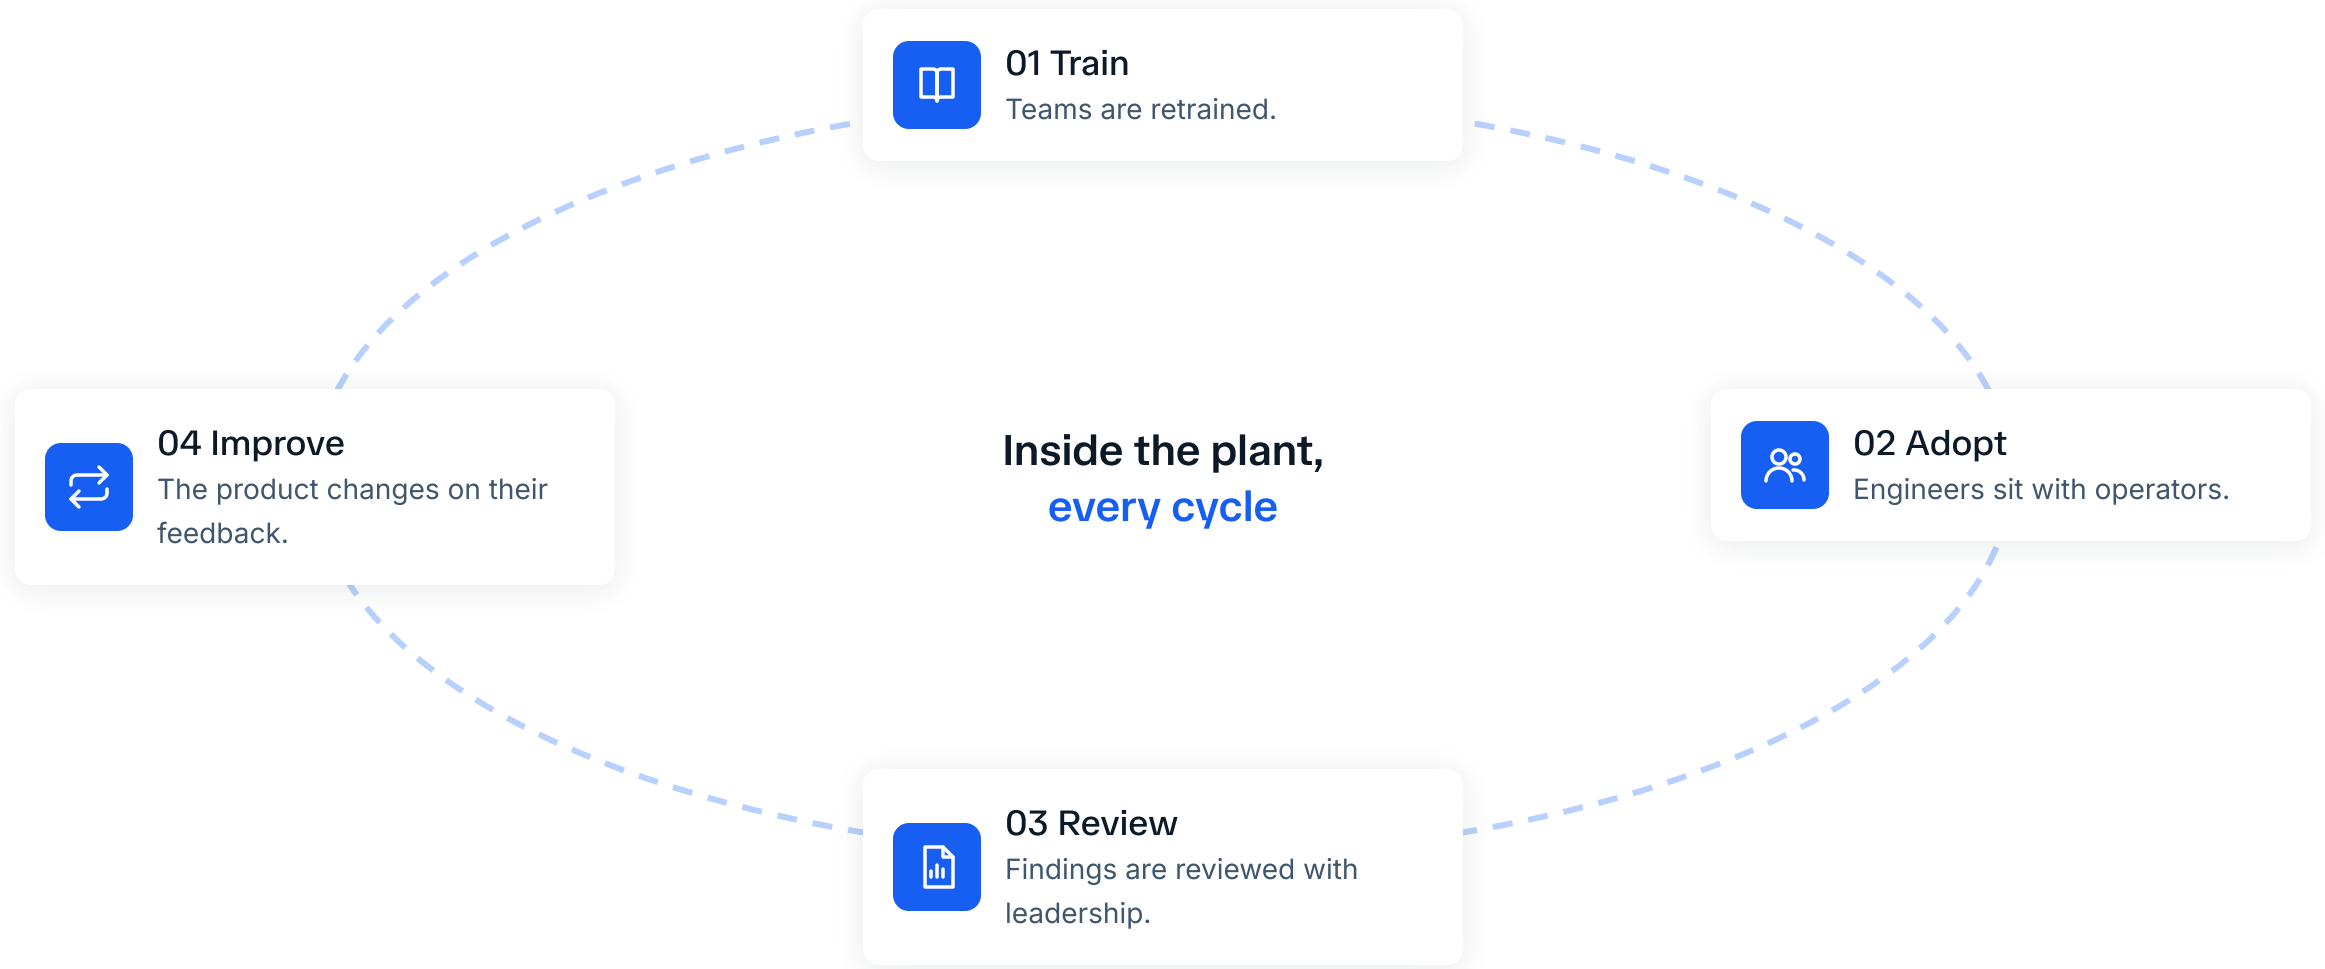

L.E.K. CONSULTING

Consultant, L.E.K. Consulting

Four: adoption. A deployment does not fail in the software. **It fails in the habit.**

So we stay in the plant.

India lets us afford what a **US** vendor cannot.

Expert assessment, per account

US firms bill

\$50K to 200K

Faclon

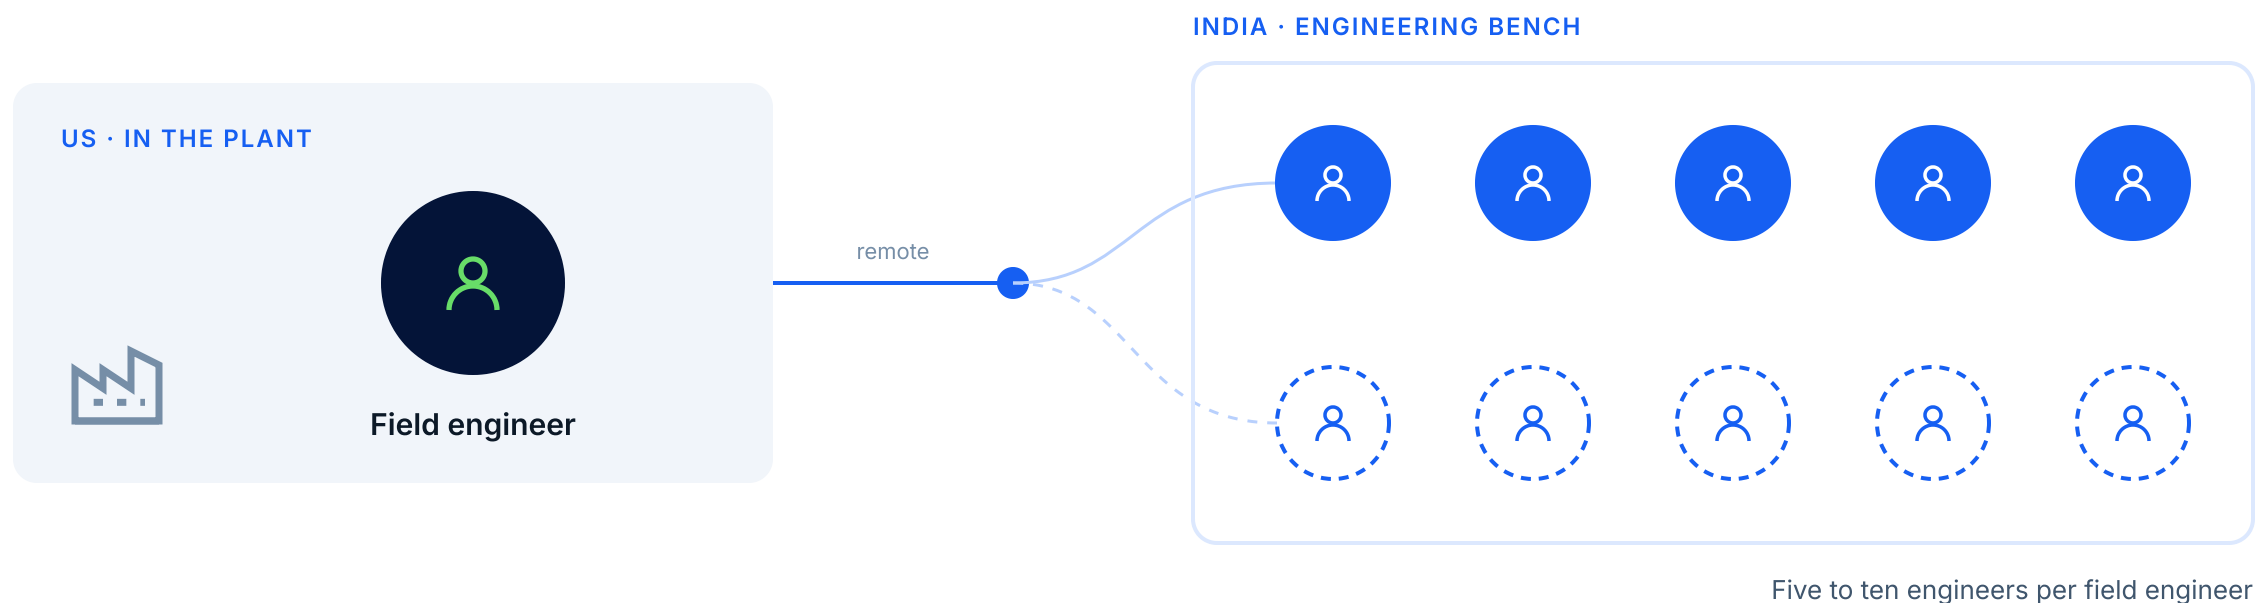

\$5K to 10K

4 to 5x

more training, change management and expert
review per account

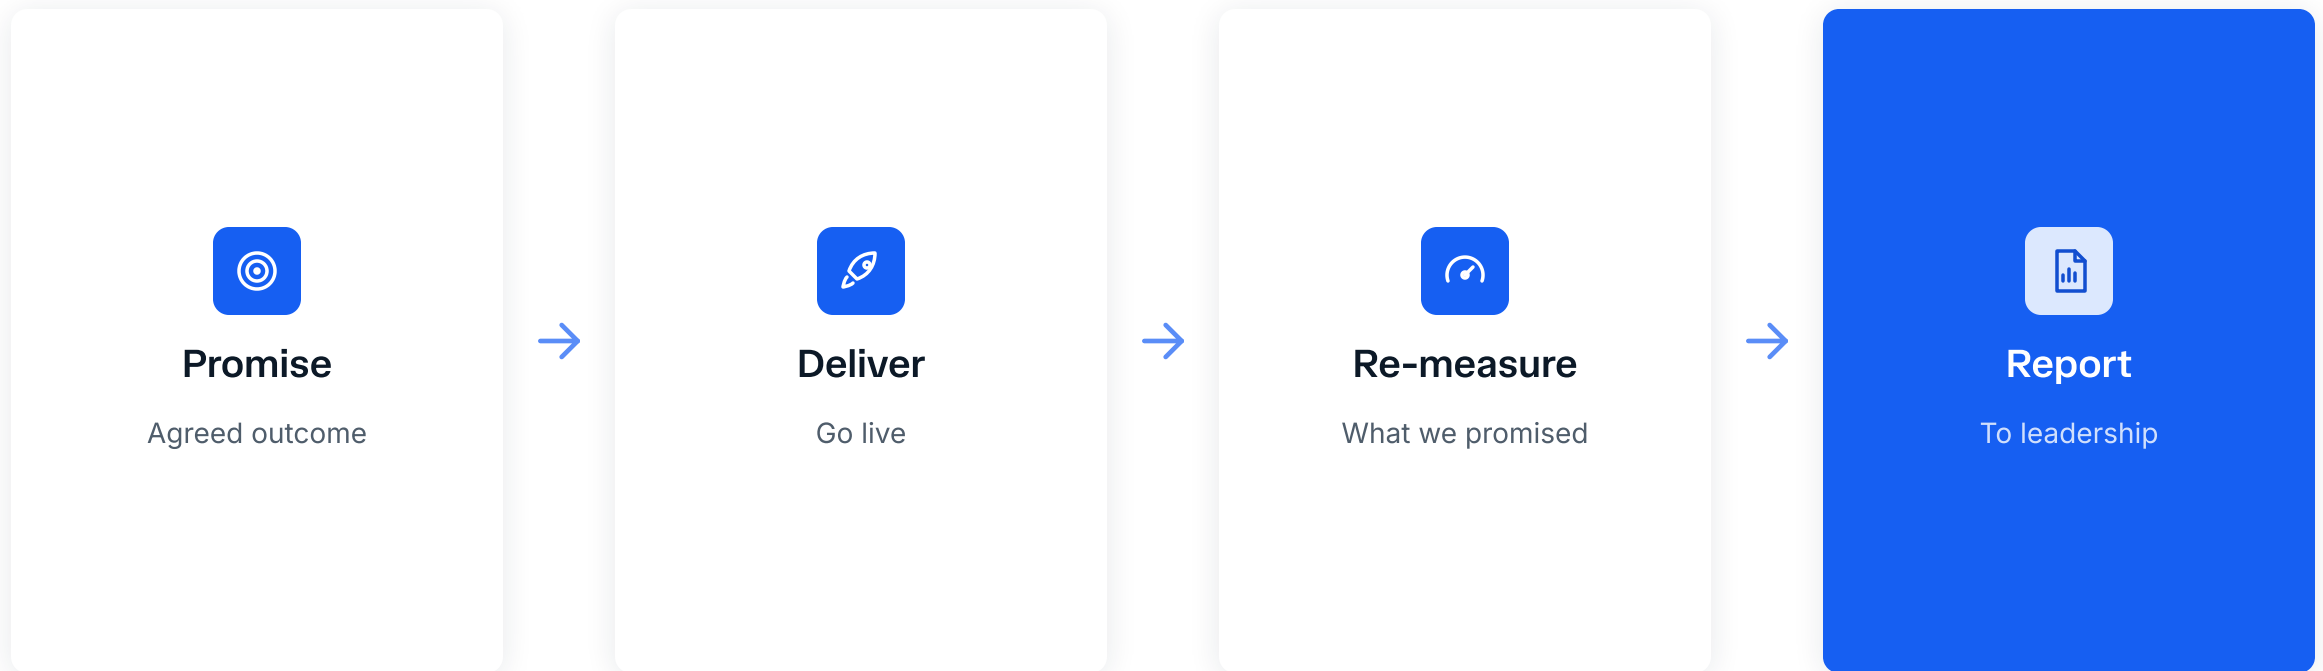

☆ Expertise arbitrage, not labour arbitrage.

One engineer in the plant. **Five to ten behind them.**

🌐 Heavy engineering runs remotely, so depth costs a fraction of local rates.

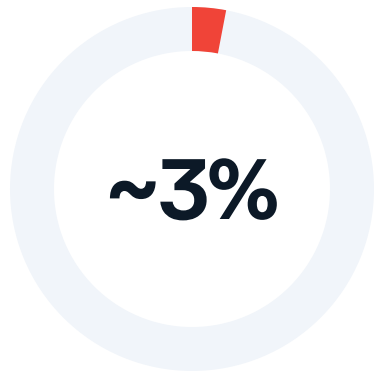

After delivery, the customer's leadership gets the numbers.

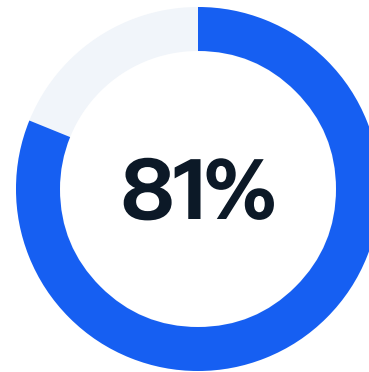

JSW

We re-measure what we promised and report it. At JSW, that report went to the **chief executive**.

So almost **nothing** dies.

Annual churn among target customers

Of FY26 revenue from existing customers

Of contracted projects delivered

↺ The first project is never the last.

“

“Unlike what you guys are telling me, that **you are there to deliver the outcome**, which is what we do. This is where our respect comes from.”

INFOSYS

Senior executive, Infosys

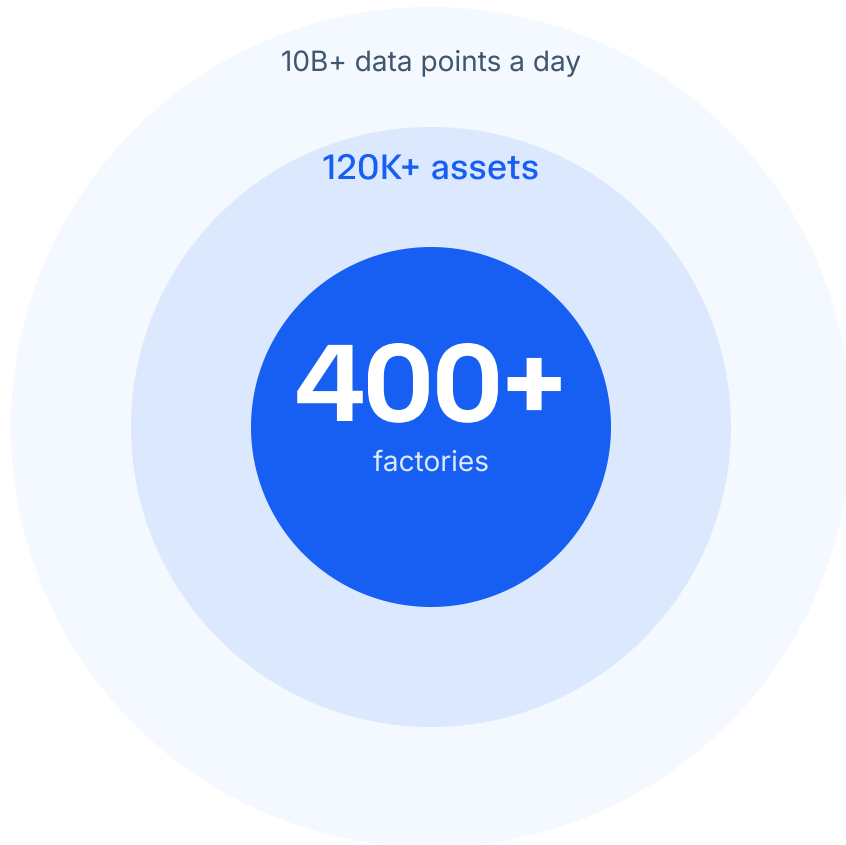

PART 4 OF 7 · IT ALREADY WORKS

This is not a pilot. It is a **business.**

400+ live factories, measured results, and revenue more than doubling this year.

04

Live in 400+ factories.

400+
live factories

120K+
assets connected

10B+
data points a day

✓ Every hard lesson already paid for.

50+ of India's largest industrial groups.

 Won in the most price-demanding market in the world.

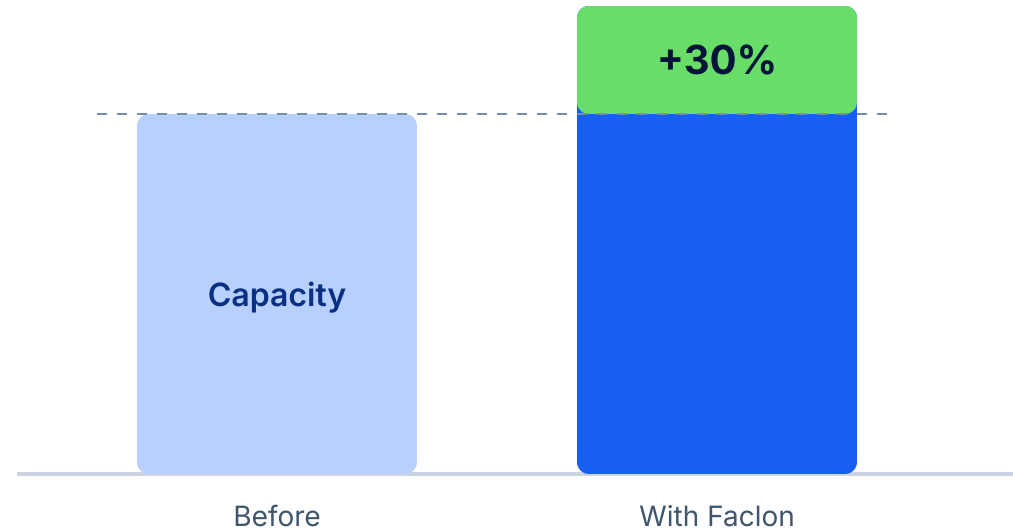

+30% capacity.

Customer result

+30%

more capacity from the same plant

LUMINOUS

93% forecast accuracy, against 80%.

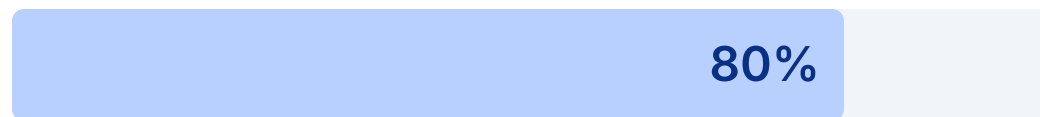

Customer result

93%

forecast accuracy, against 80% before

JSW

Before

With Faclon

Forecast accuracy, before and after Faclon.

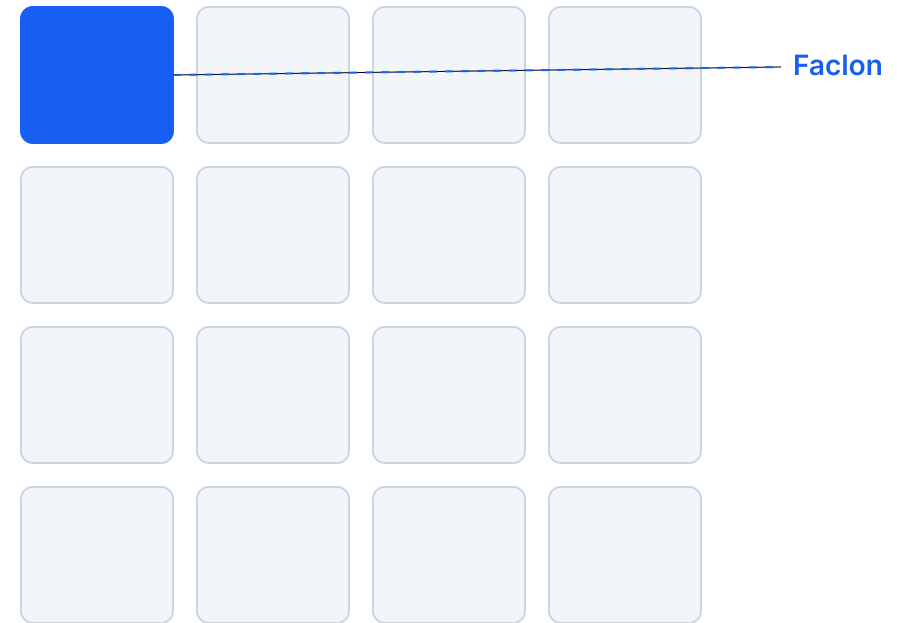

Vision inspection at **a sixteenth** of the cost.

Customer result

1/16

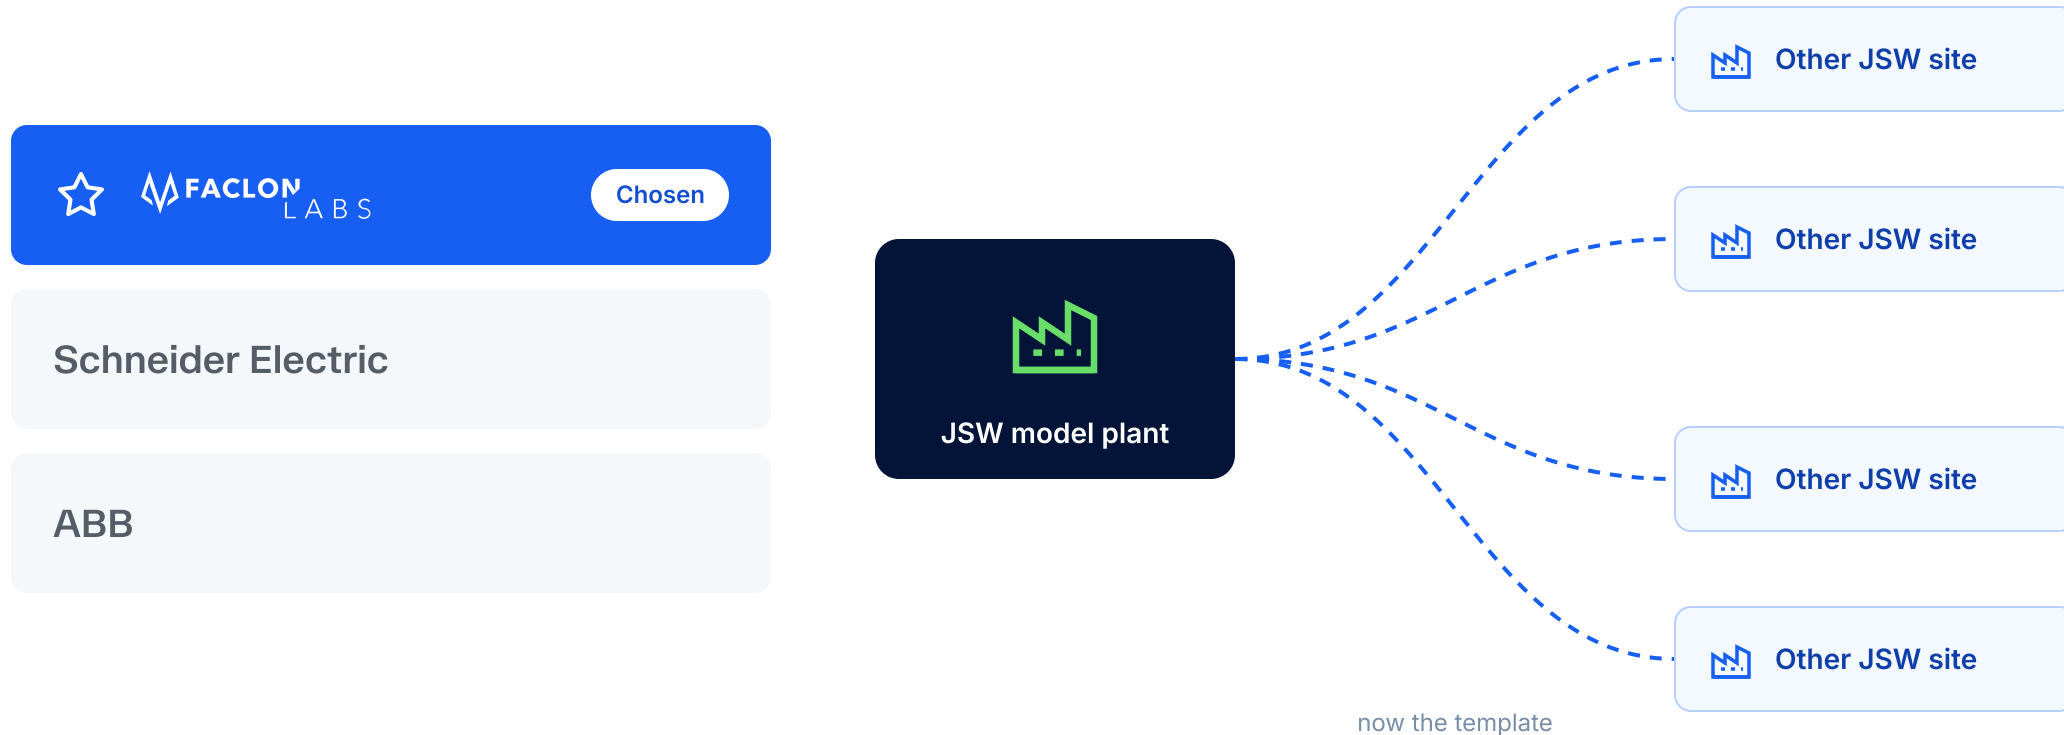

of the usual cost of vision inspection

NESTLÉ

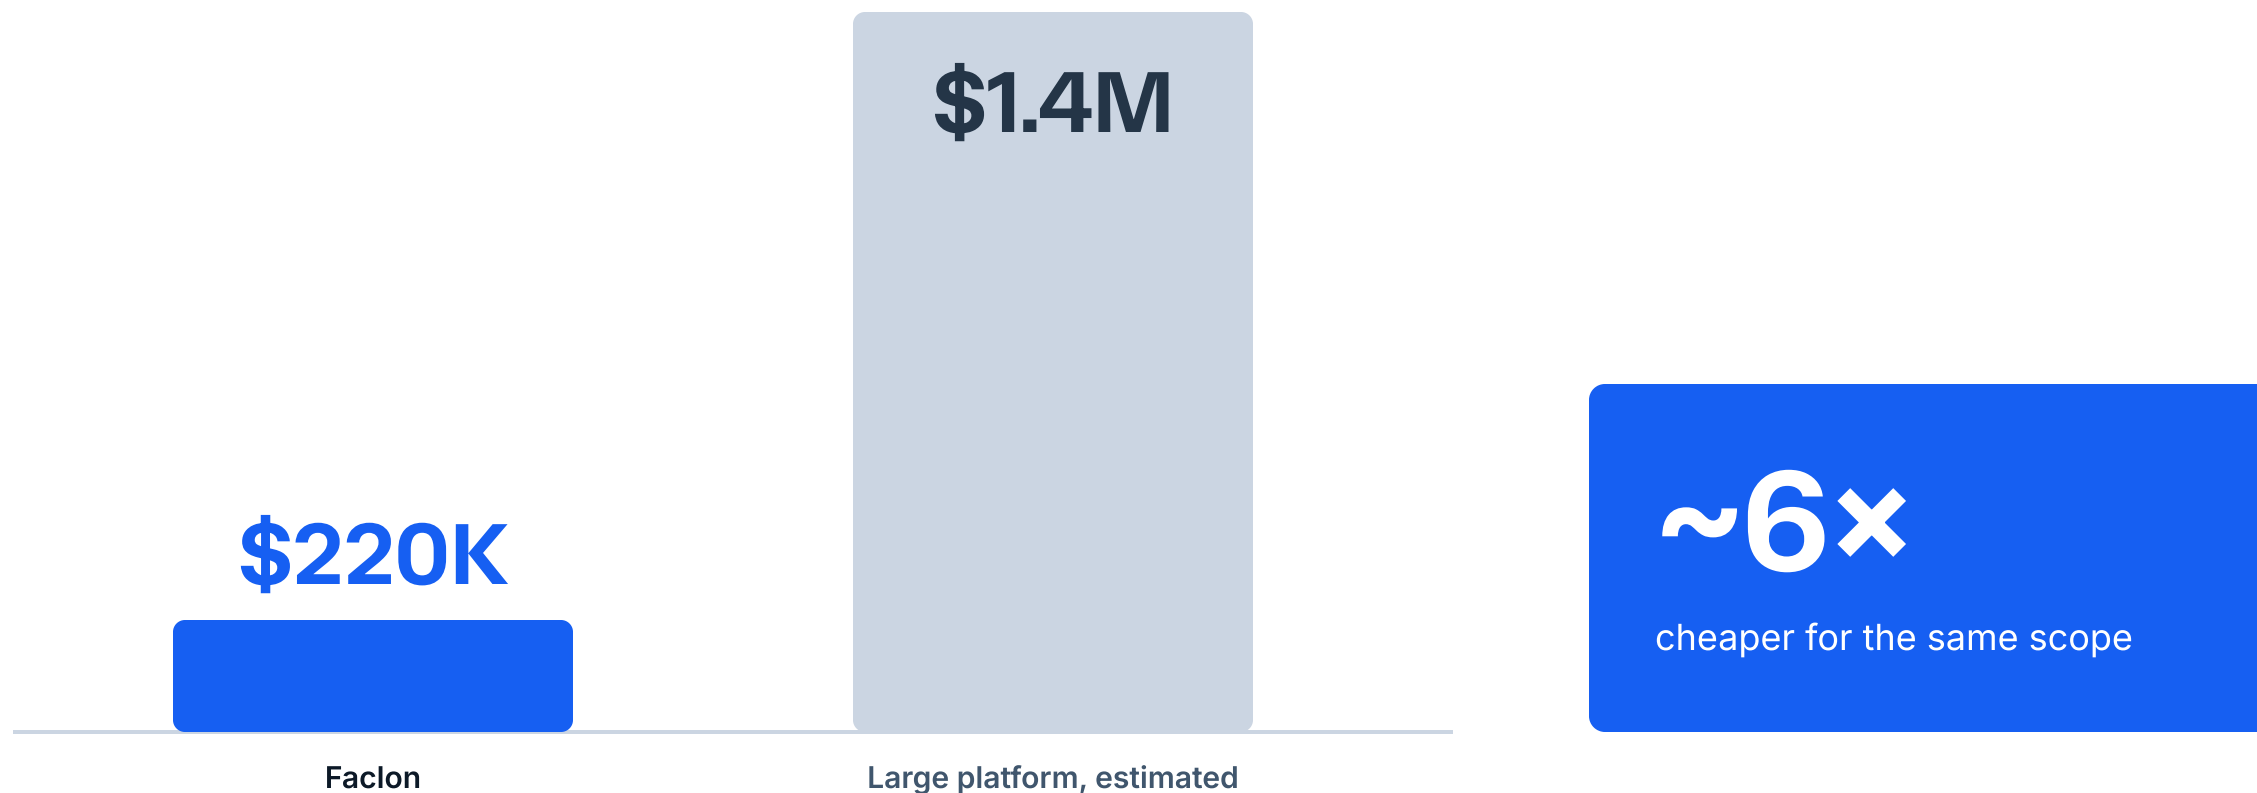

Each square = 1/16 of the usual cost

We won the model plant against Schneider Electric and ABB.

✓ Won on delivery, not on price.

About **\$220K**, where a large platform is about \$1.4M.

“

“I really like that you call out the company as something that will provide **end-to-end services**, starting from sensors integration to solutions that can prevent breakdowns and drifts in processes.”

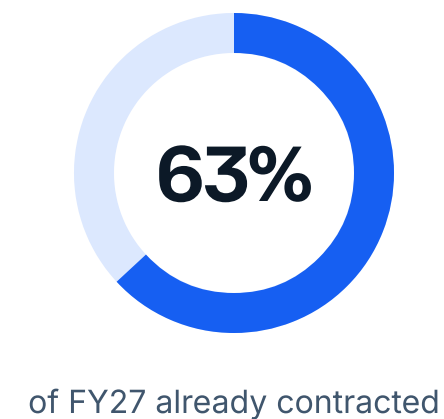

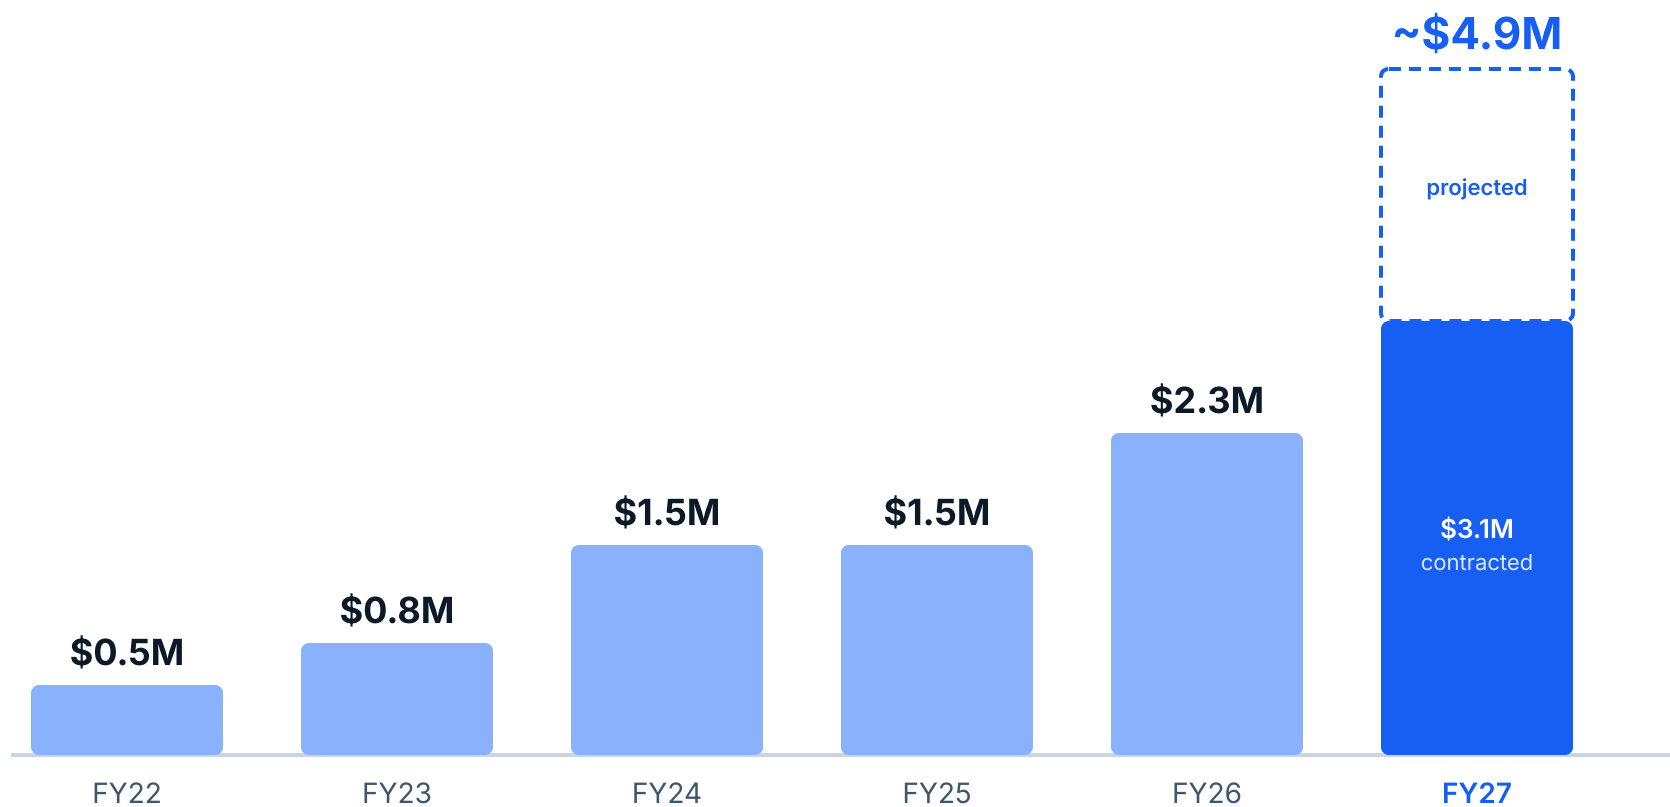

PROCTER & GAMBLE

AI and data science lead for manufacturing, Procter & Gamble

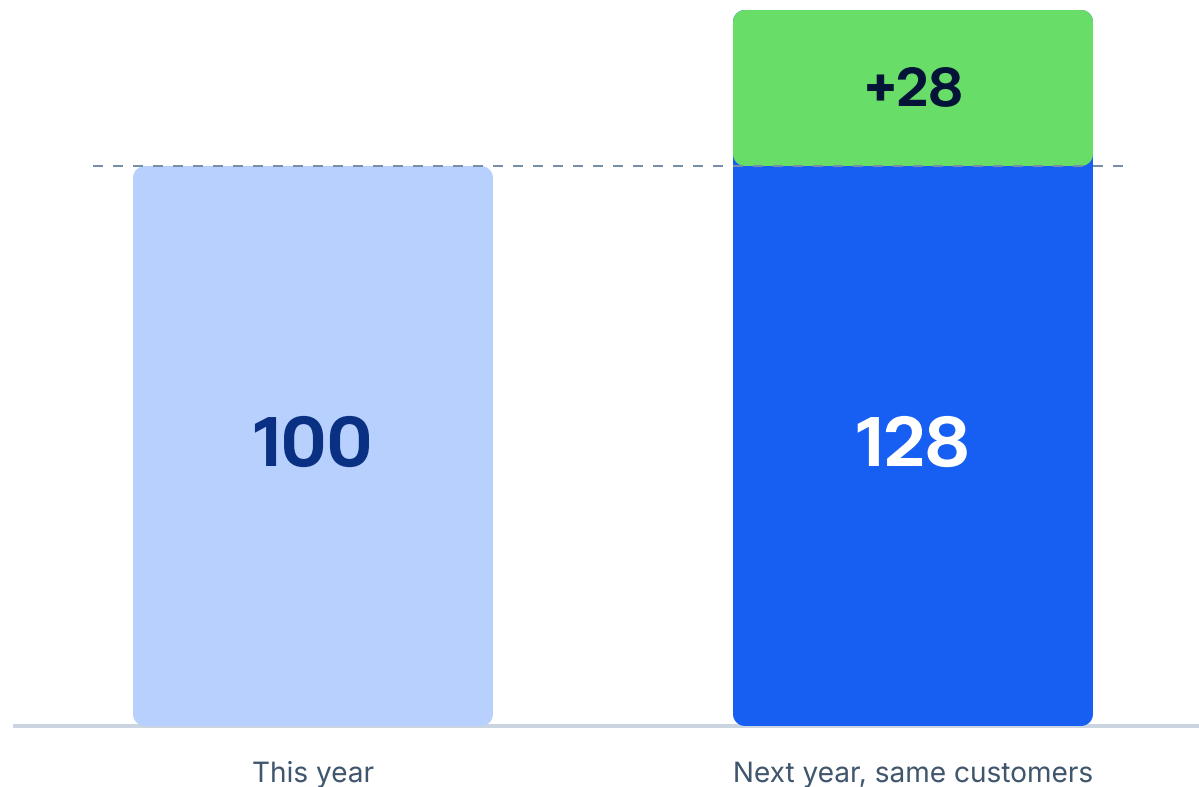

Slow to land. Impossible to dislodge.

Revenue **more than doubles** this year.

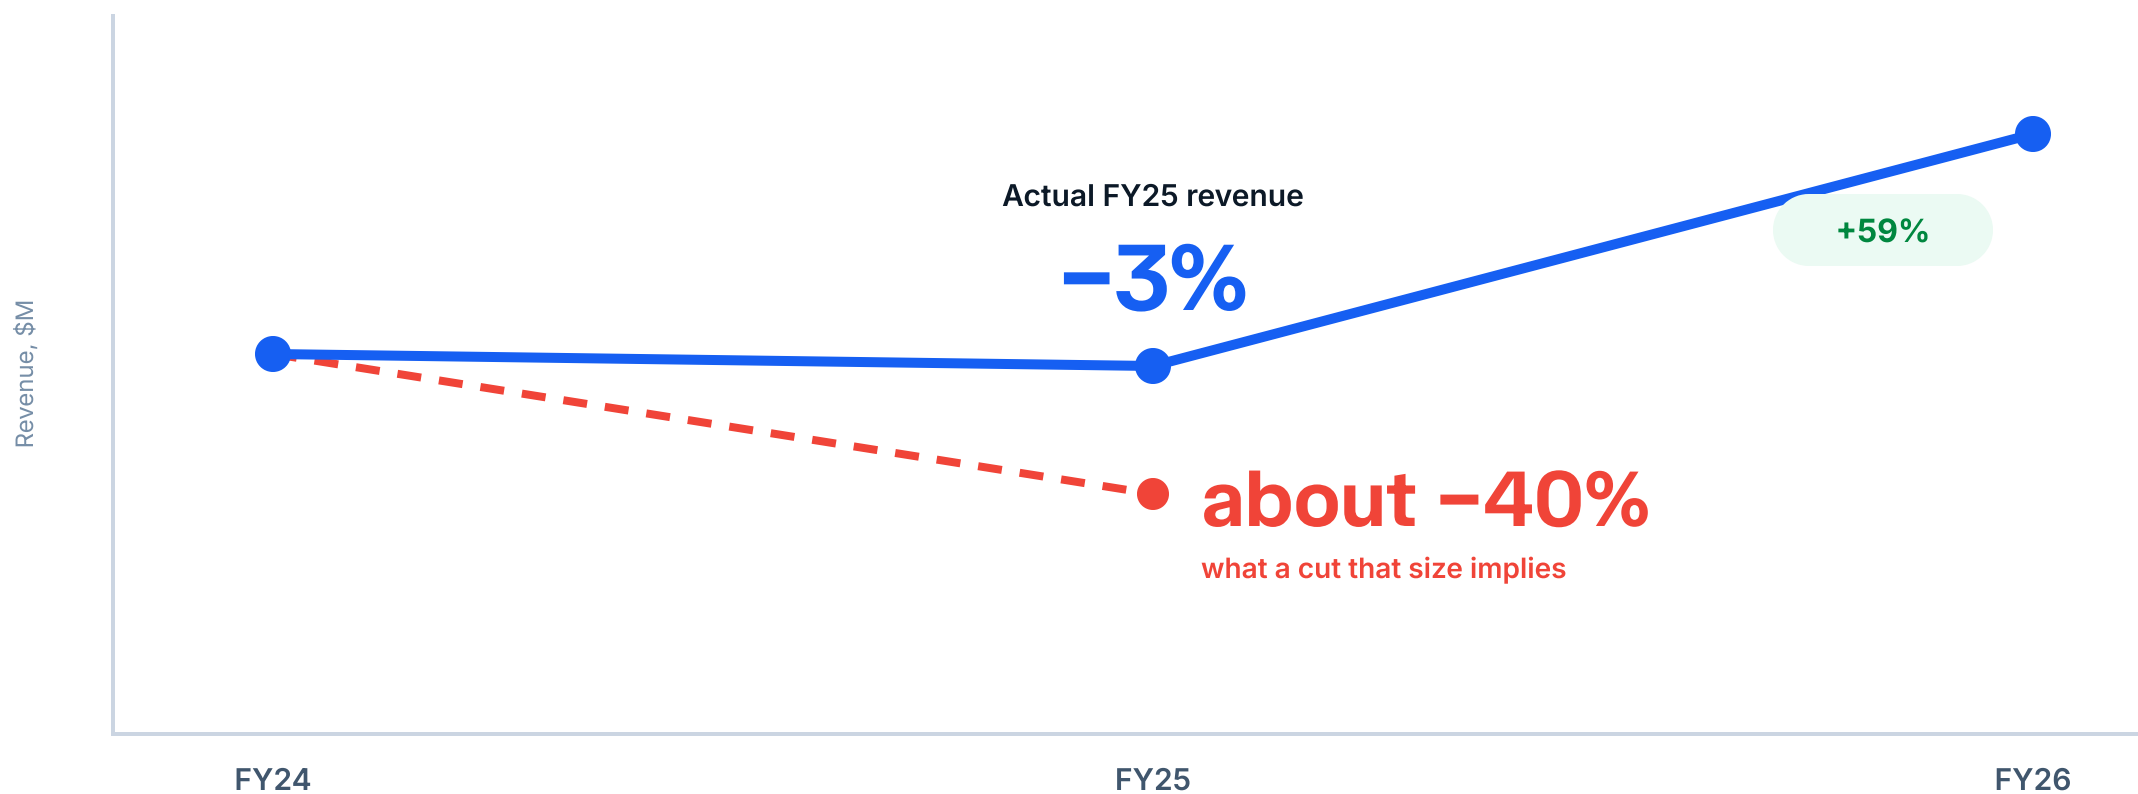

128% net revenue retention.

128%

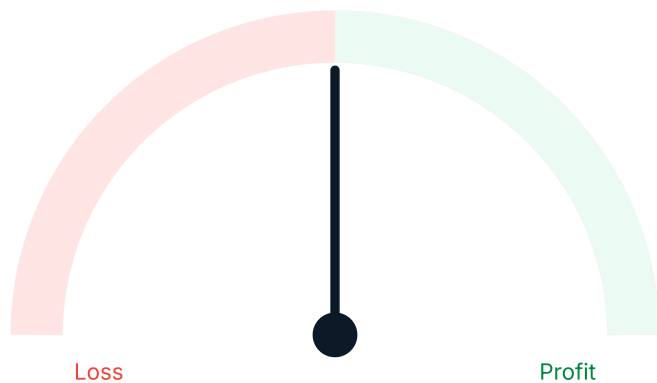

The customers we already had spent **28% more** with us the next year.

We cut 194 small accounts on purpose, and **revenue held**.

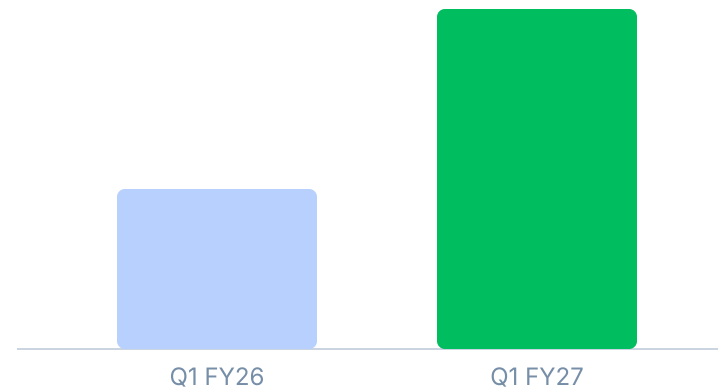

© Focus, not shrinkage. FY26 then grew 59%.

India **pays for itself.**

Breakeven

India operations, before central R&D and the US build

+114%

India revenue, Q1 FY27, year on year

🚀 New capital funds the US build, not survival.

“

“The growth you guys are having is **insanely impressive**. The LTV to CAC and NRR is just amazing.”

GROWTH INVESTOR

Growth investor, \$125B under management

PART 5 OF 7 · THE US ANSWERED

India proved the machine. The US answered.

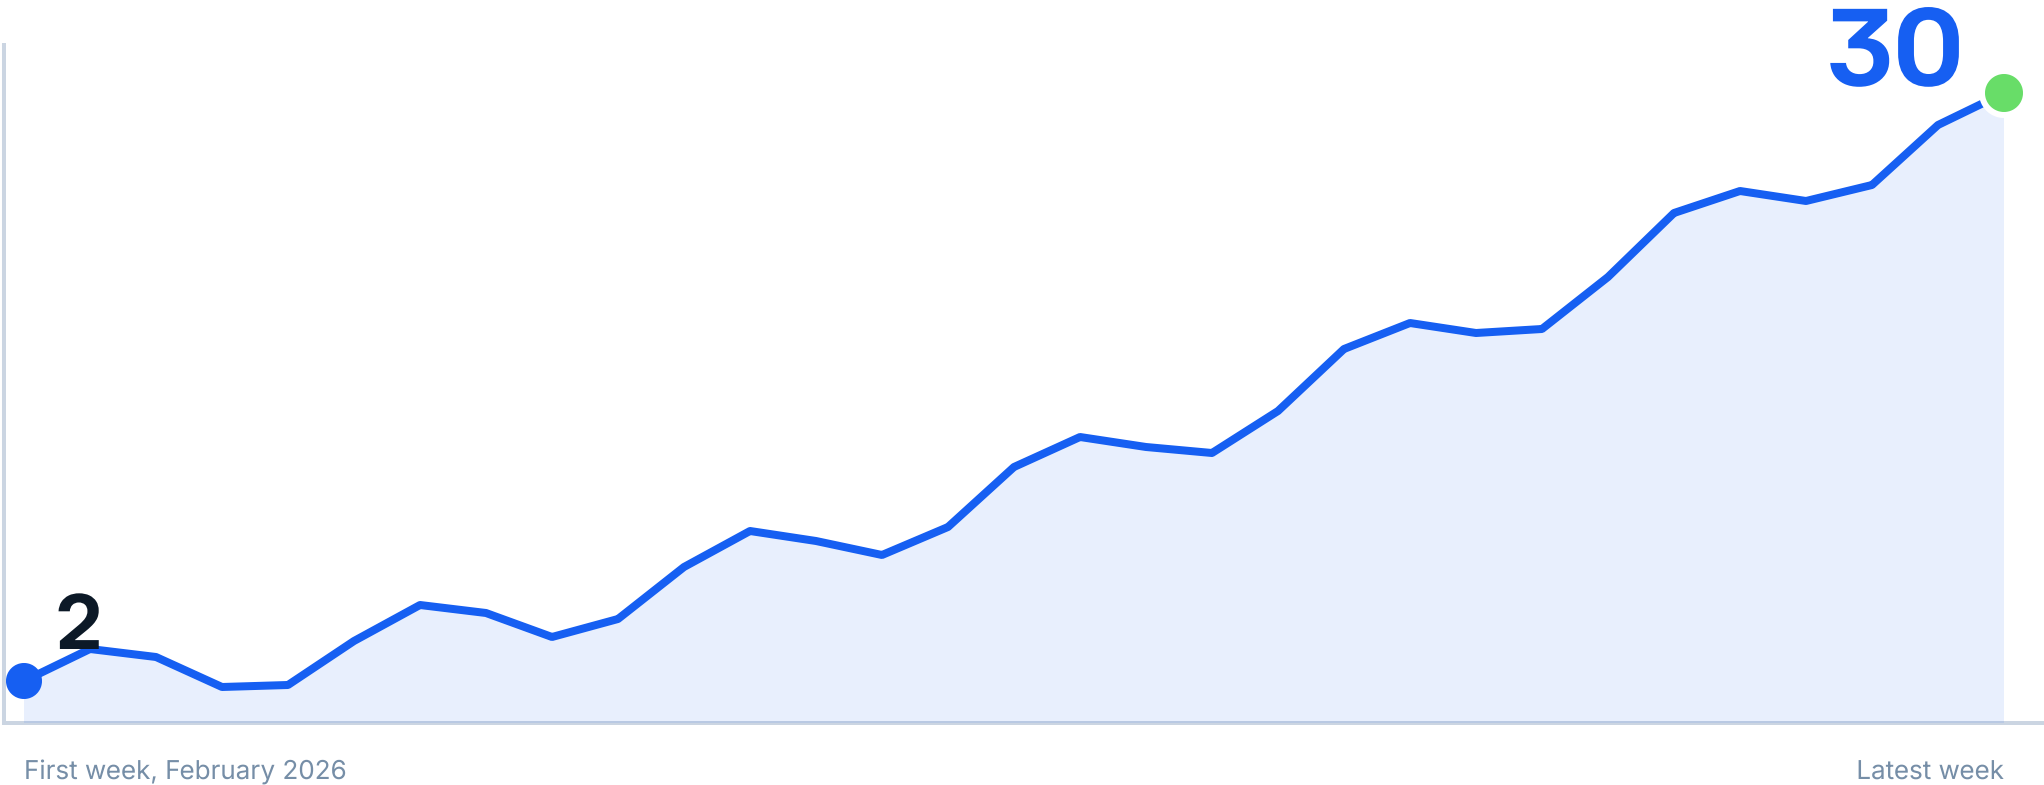

US customer conversations went from 2 a week to 30 a week.

05

US customer conversations, week by week.

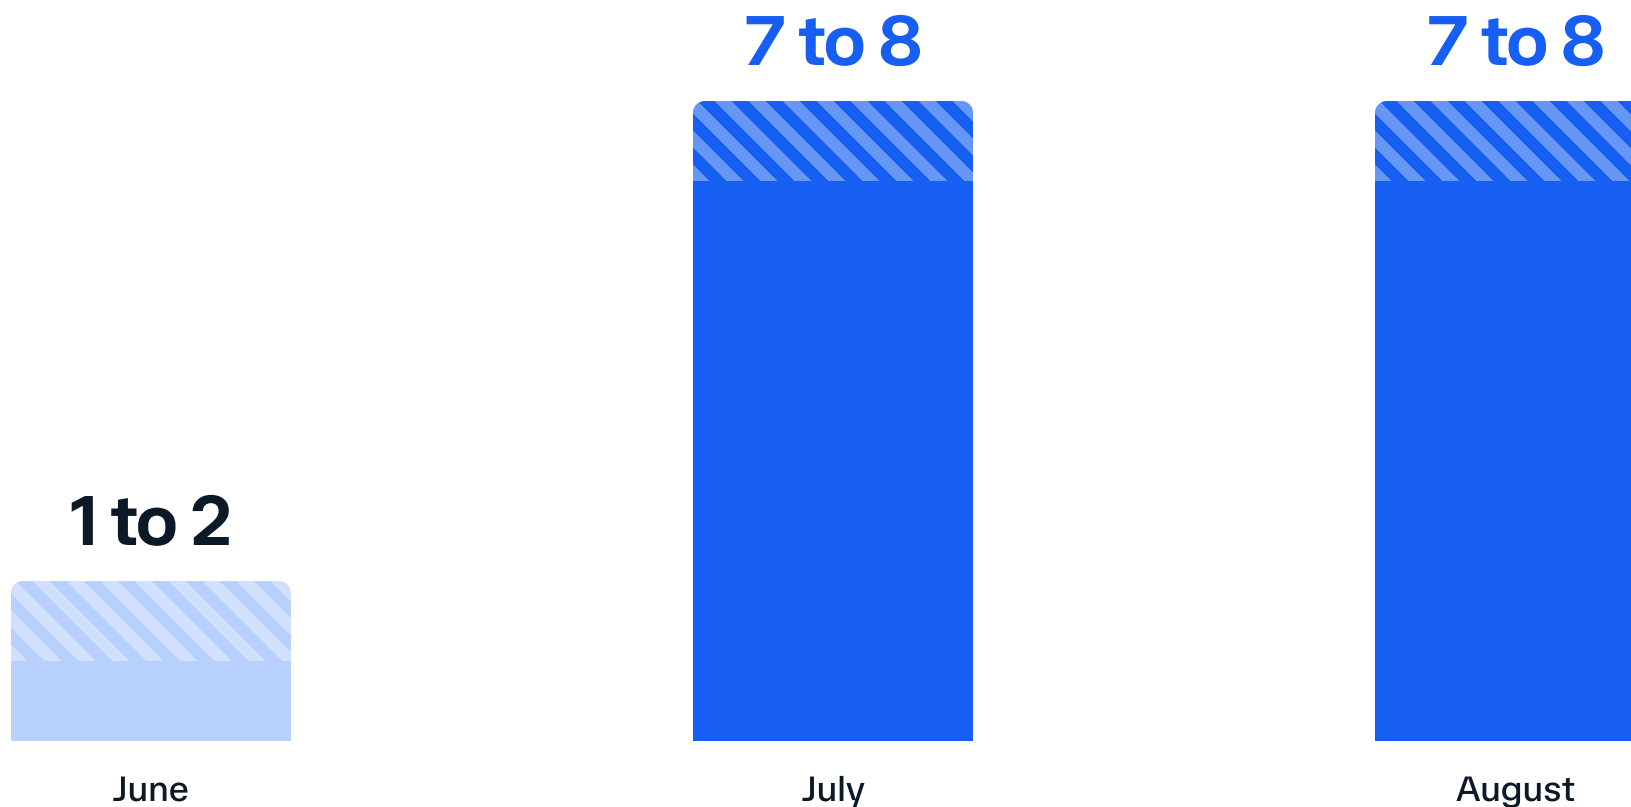

Qualified customer conversations per week

Illustrative series · refresh from CRM

↗ Seven months, a small team, and a line that keeps climbing.

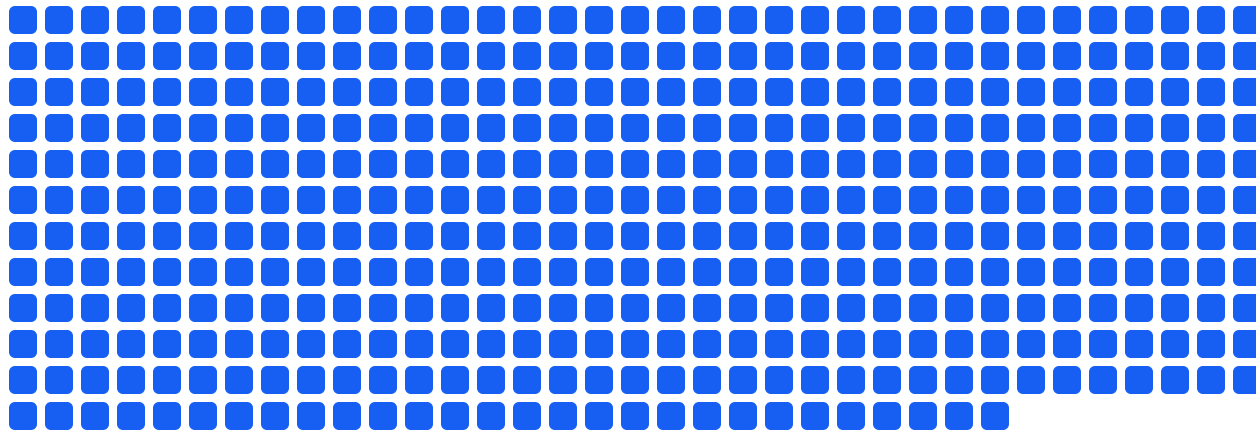

Qualified meetings a week went
from one or two to **seven or eight**.

Hatched top = range

🔗 Qualified meetings, not hellos.

413 recorded US calls since June.

413

calls since 16 June 2026. Each square is one call.

Recorded

Indexed

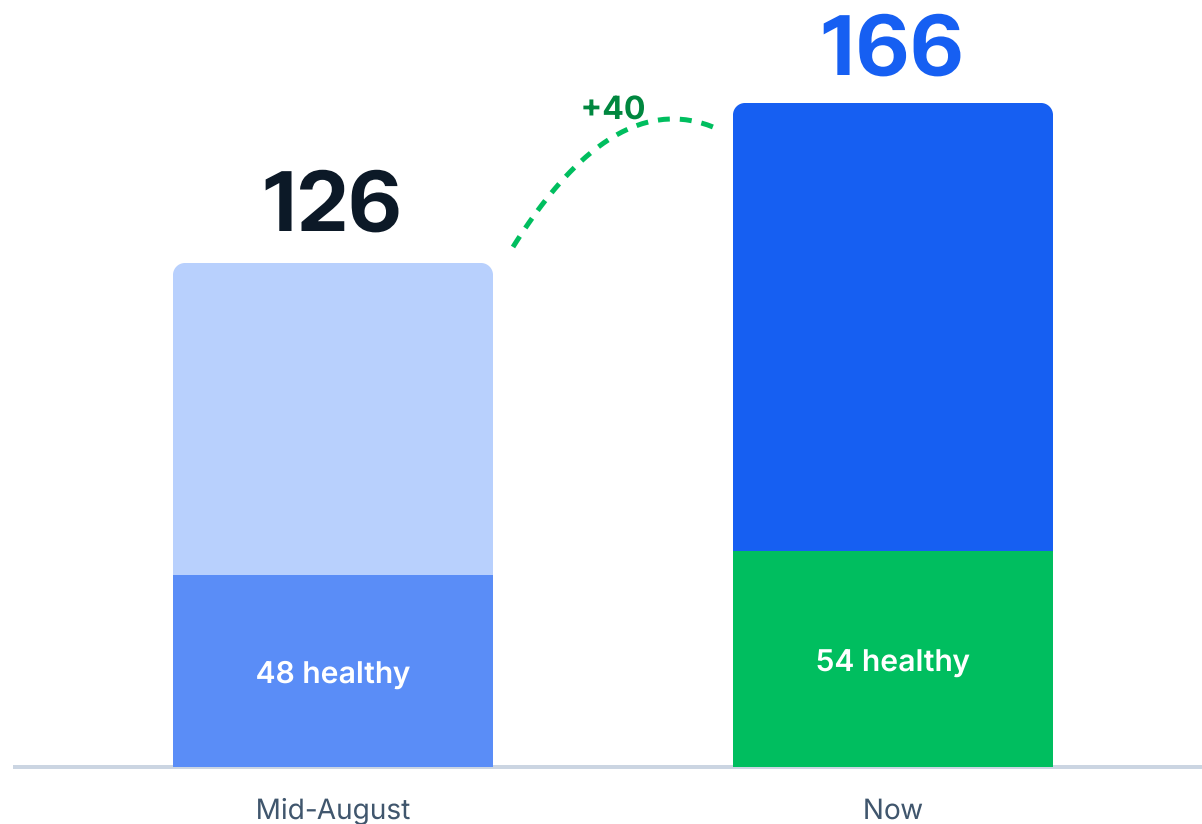

Fed into the next pitch

First US customer, 68 days after the first qualified lead.

52 qualified opportunities

Partner relationships went from 126 to 166 in five weeks.

HPE and AWS are opening accounts we could not open alone.

■ All relationships

■ Healthy

Why the US answered **this fast.**

01

Price

The price came down to where a plant can decide locally.

02

Timeline

The timeline fits inside a budget year.

03

One vendor

One vendor does the whole job.

We did not create demand. We made **existing demand buyable.**

“

“Timing is ripe for you. I would wager that you'll get interest in the US in **a broad spectrum of clients.**”

BCG

Partner, BCG

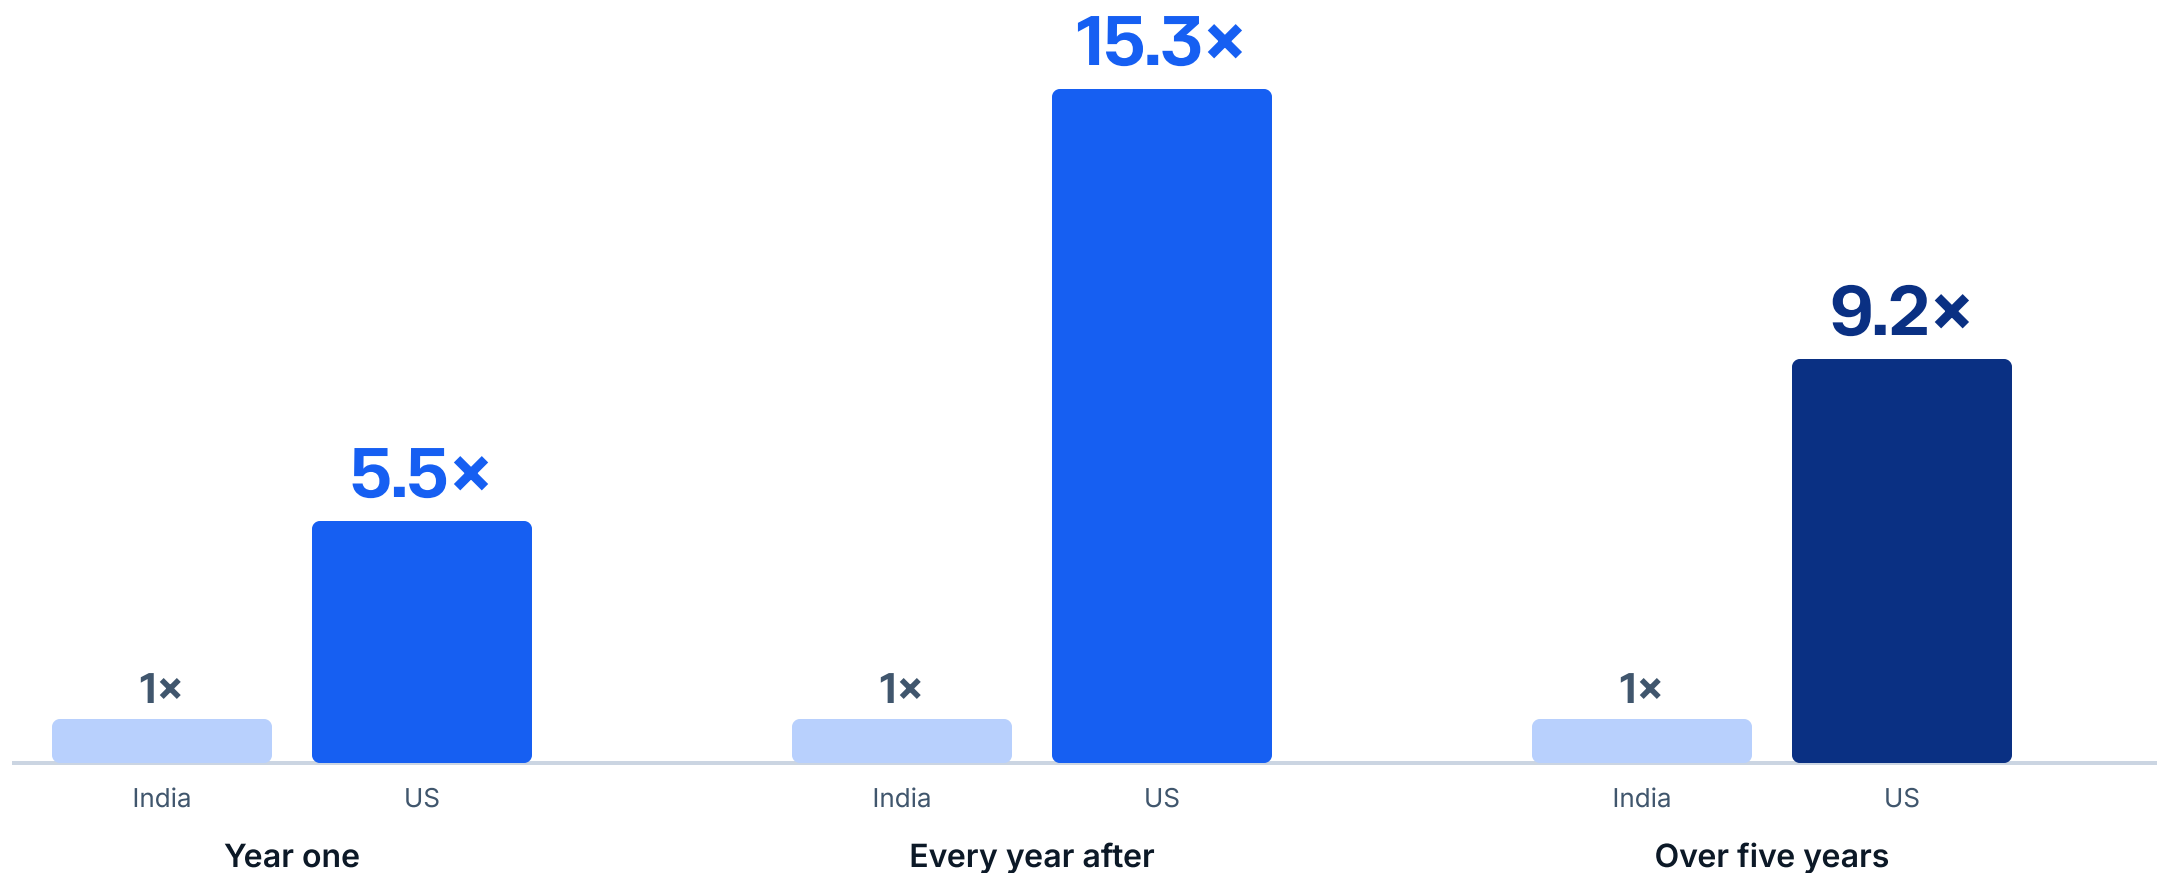

“

“I think I've seen kind of enough here that
I think we should get you in touch with
our guys that are running the factory.”

STRATASYS

Executive, Stratasys

The same work is worth **about 9× more** here.

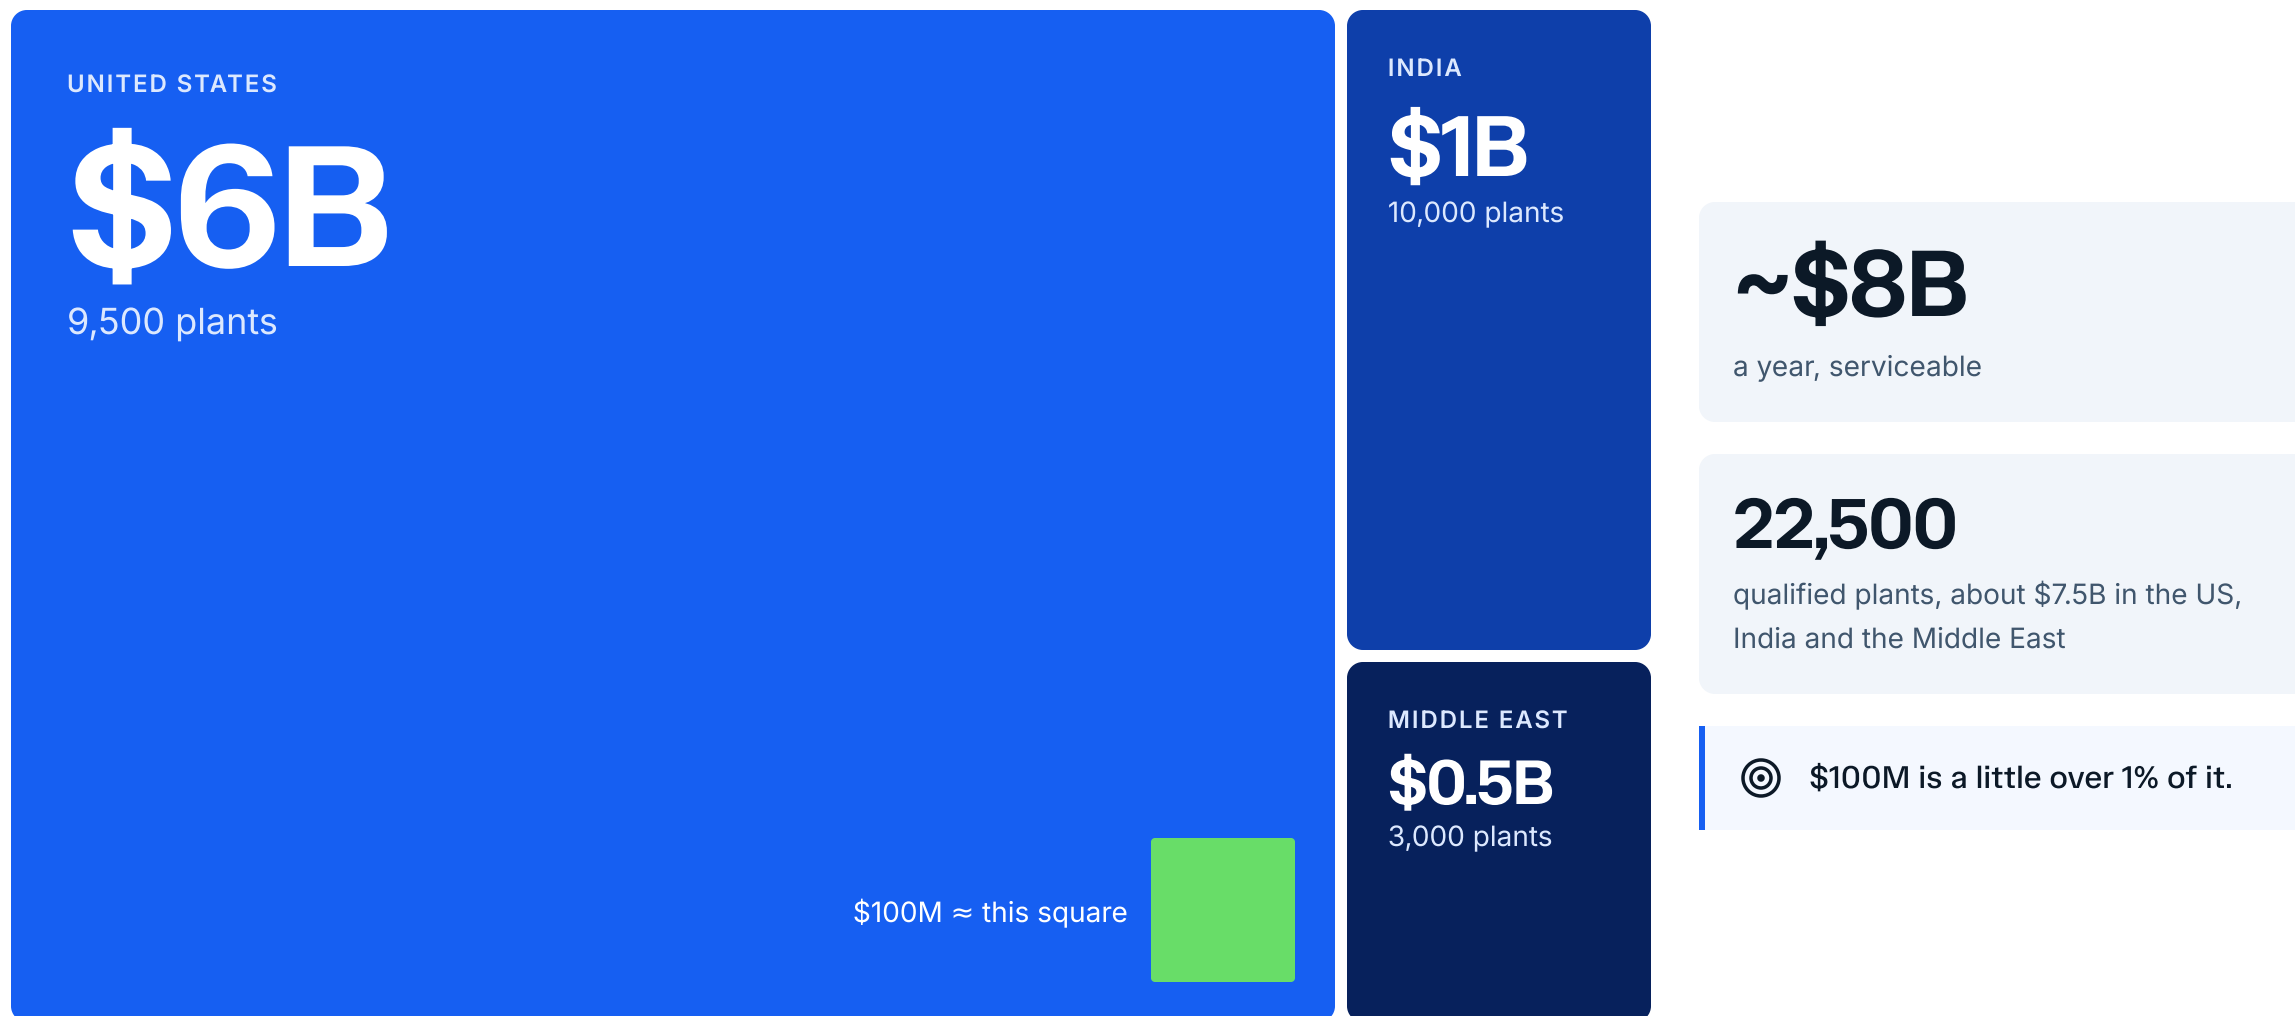

PART 6 OF 7 · MARKET, POSITION AND THE PLAN

\$100M is arithmetic on **what already works.**

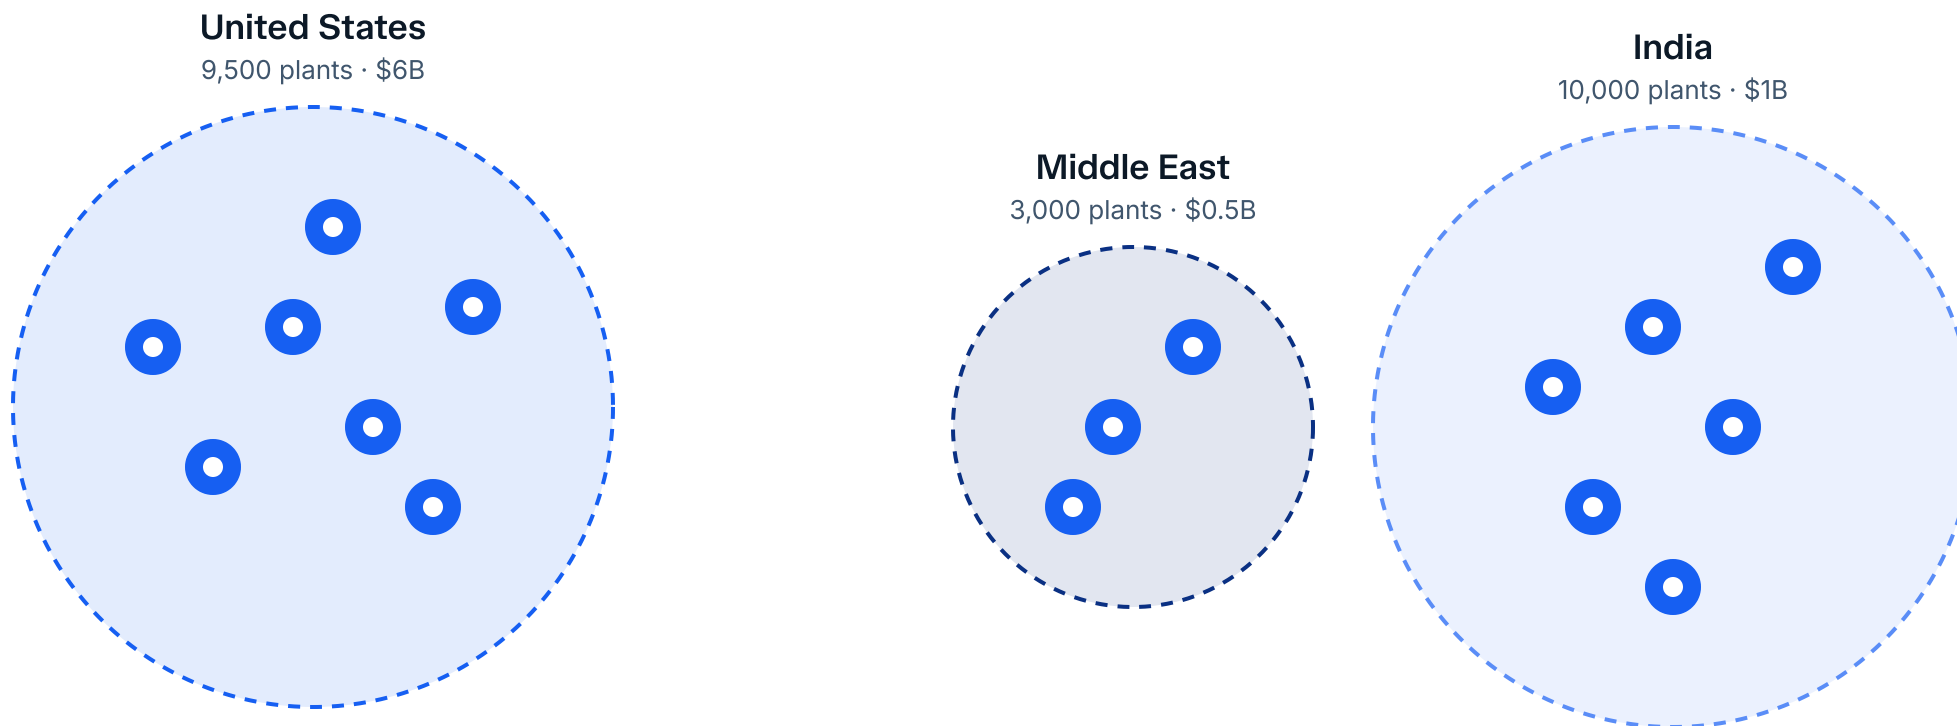

\$100M is a little over 1% of what Faclon can already serve.

06

About **\$8B a year** of spend we can serve.

22,500 plants, and most of them sit in 16 clusters.

● = one cluster · 16 total

16 clusters hold about 84% of qualified plants. Small local teams reach most of the market.

Everyone owns a piece. Nobody owns the whole job.

Fast,
repeatable
deployment
↑

Point tools

Single-use apps for one problem

Harness, context, compiler, adoption

Data platforms

Palantir, C3 AI, Cognite

Automation giants

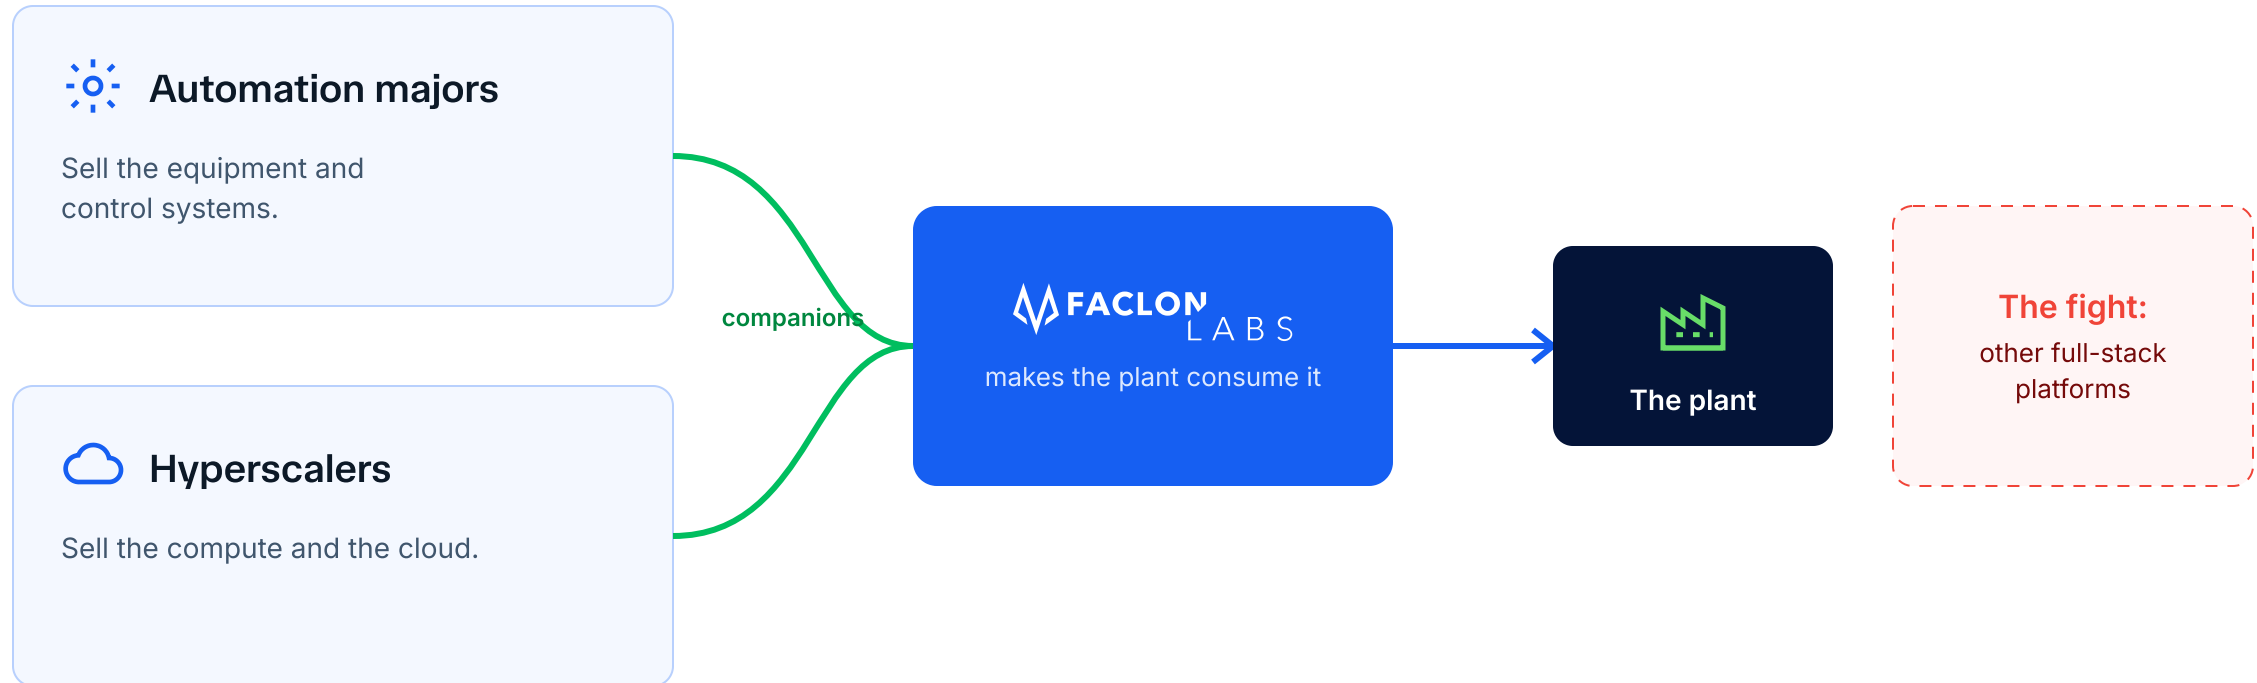

Siemens, Schneider Electric, ABB, Rockwell Automation

↓ Slow,
custom
project

← Narrow tool

Whole job →

Half that map is **distribution**, not competition.

🔗 Both need someone to make a plant consume what they sell. They are companions.

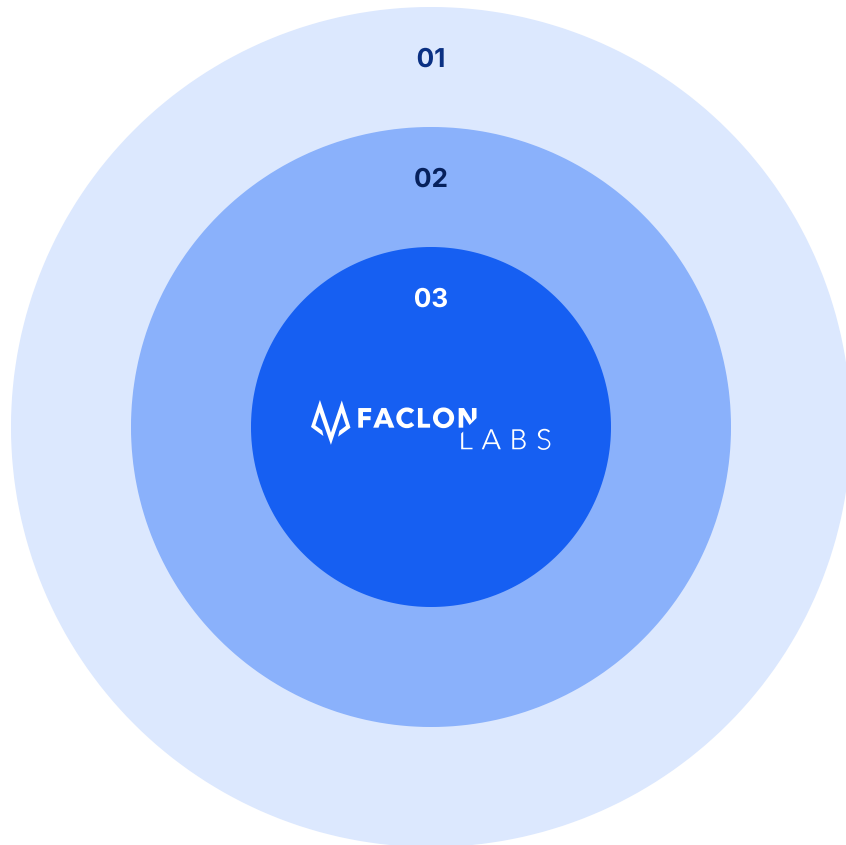

“

“The incumbents often **don't have the domain expertise**. This is more domain and use-case specific than what you typically find through an incumbent's data fabric platform.”

DARCY PARTNERS

Partner, Darcy Partners

Why this cannot be copied quickly.

01 Proven building blocks

Tested in production over years.

02 Five years of context

From 400+ factories.

03 Connect to any equipment

Safely, behind plant security.

A rival can open an office. Rebuilding five years inside 400 plants still takes years.

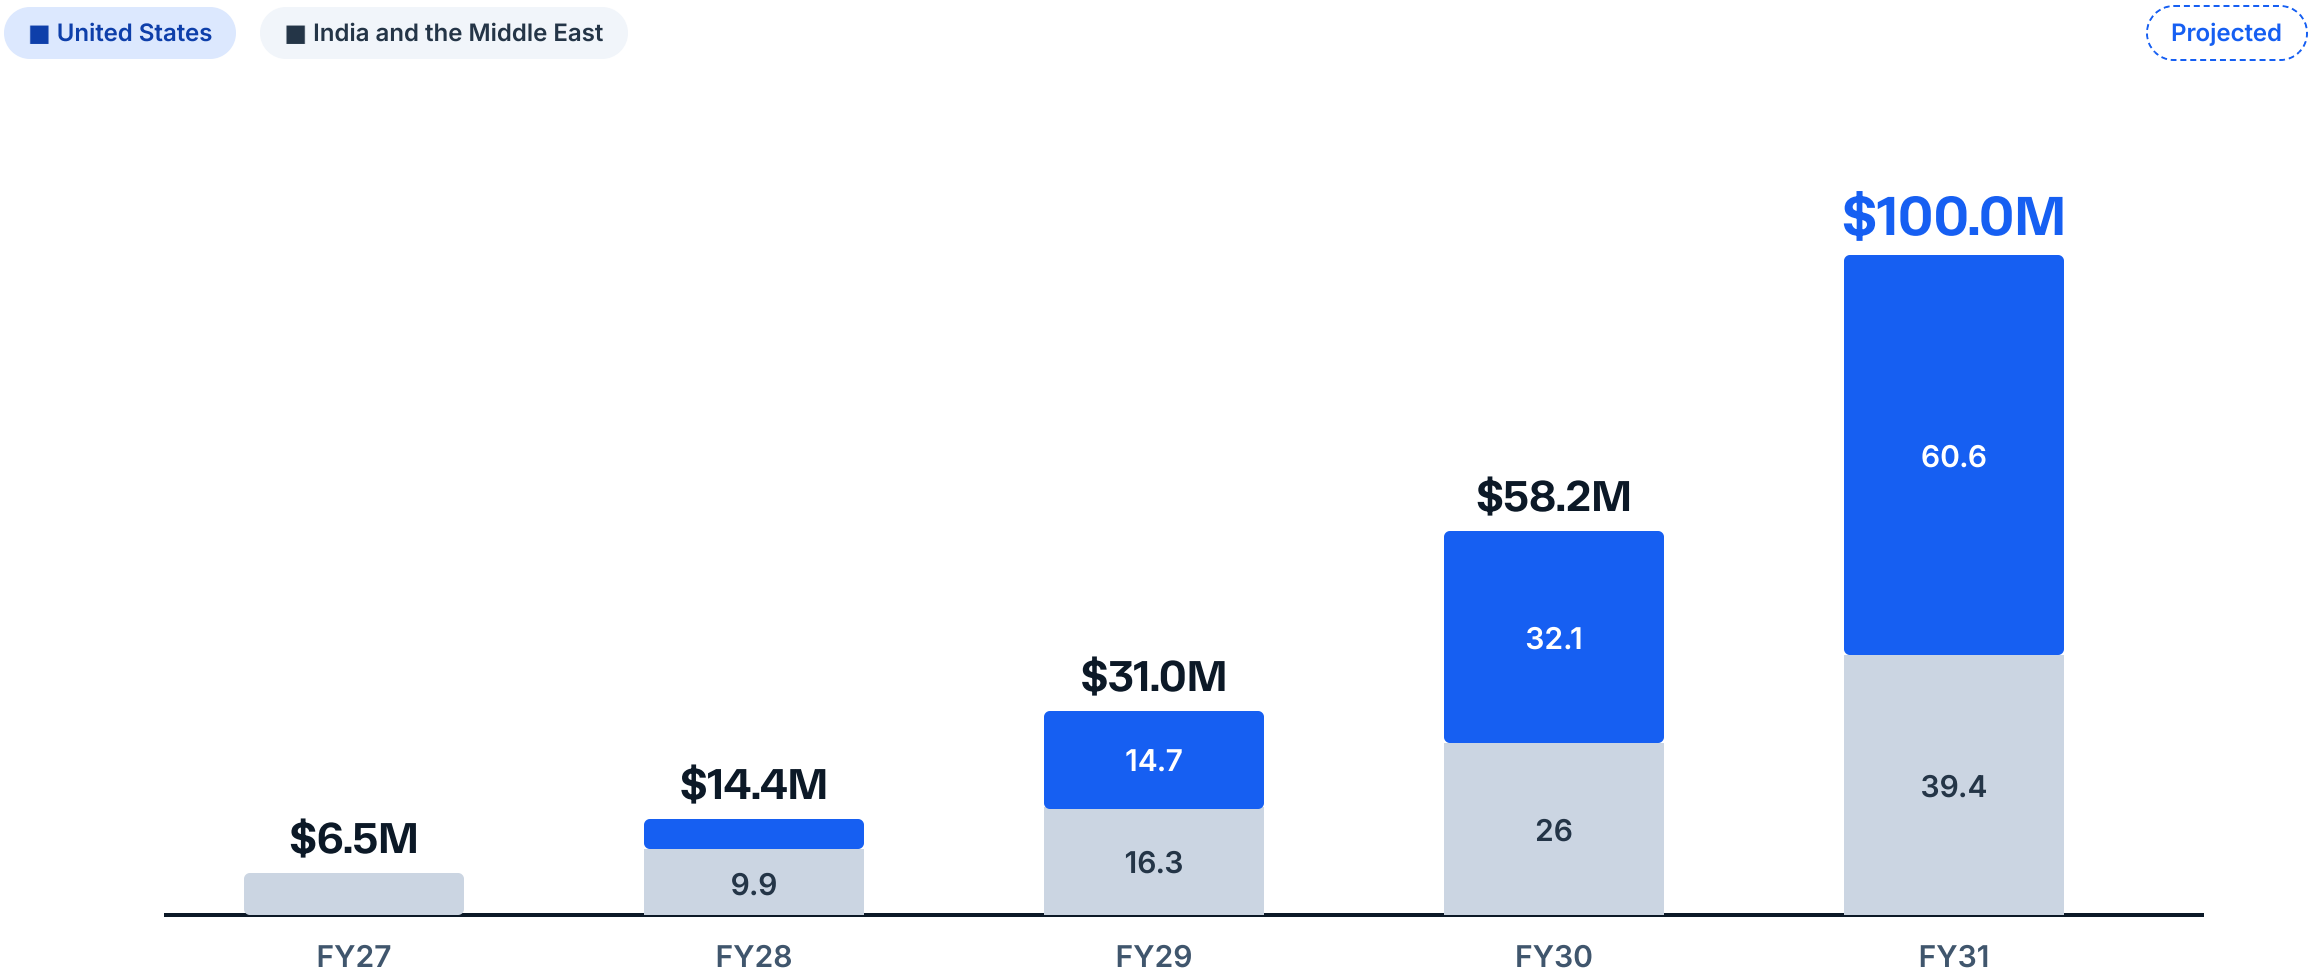

“

“If I go and speak with a bunch of other SIs as well, they'll probably tell me the same story, and **they will not be doing what you're doing.**”

MCKINSEY

Partner, McKinsey

\$100M of run-rate by FY31.

Exit run-rate, fiscal years ending March, \$M. All figures projected. FY27 split not shown.

What has to **be true**.

\$100M run-rate

Plan

~18

new US customers a month by FY31

68

partners signed

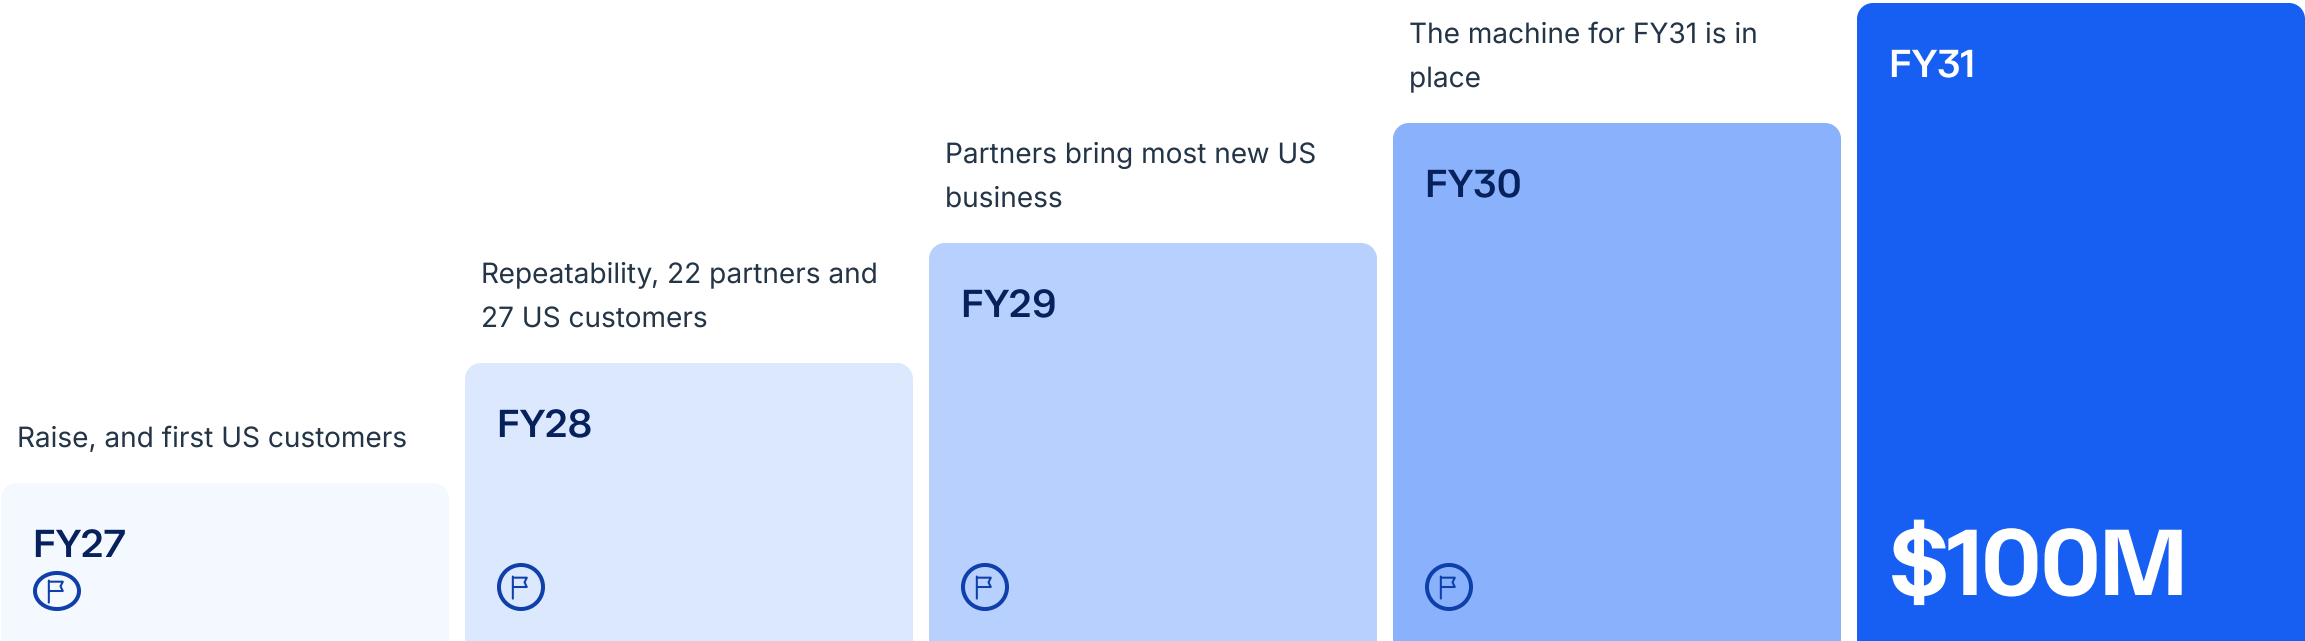

India

keeps its measured growth

◇ Built from capacity up, not back-solved from \$100M.

Every year has **one gate.**

Plan

The reasons not to invest, **from us first.**

RISK

WHAT WE ARE DOING

 We are new to US buyers.	→	 Partner-led entry through HPE, AWS and integrators, plus US leadership hires.
 Partners are signed but not yet producing.	→	 Joint demos and training, with direct sales running in parallel.
 US price points are still being set.	→	 Tested deal by deal, with room to rise against incumbents.
 Incumbents respond.	→	 Our context and our position inside each account, and no dependence on any single vendor.
 Plants stay in pilots.	→	 Priced to prove value within months, and 70 to 85% of revenue is repeat.

PART 7 OF 7 · THE TEAM AND THE ROUND

The team that already did it **400 times.**

Four founders and 160+ engineers and industrial specialists.

07

Five years inside factories. Now taking the same machine **to the US.**

03

US Series B

Our priced US Series B follows.

Did we **prove it**?

- ✓ 01 Industrial AI is the next large AI market, and it is early.
- ✓ 02 Factories want it. Almost nobody can scale it.
- ✓ 03 Faclon rebuilt deployment: harness, context, compiler, adoption.
- ✓ 04 It already works, in 400+ factories.
- ✓ 05 The US answered, and demand is climbing weekly.
- ✓ 06 \$100M is arithmetic on what already works.

**Every factory will run on AI.
The only question is **whose**.**
