CASE STUDY · CEMENT · 17 MTPA

One cement plant. 15 systems, each holding its own data.

What changed when Faclon connected them.

How a 17 MTPA cement producer connected its plant data and put AI to work, in three steps.

01 · Connect | 02 · Decide | 03 · Optimise

THE STARTING POINT

Different vendors. Different screens. No single view.

BUSINESS SOFTWARE	Silo	MACHINE CONTROLS	Silo
ERP		Kiln & mill	
LAB TEST RESULTS	Silo	ENERGY METERS	Silo
Quality		Power	
WASTE-HEAT RECOVERY	Silo	PAPER LOGBOOKS	Offline
WHR		Shift notes	

YOUR TURN · COMMENT YOUR ANSWER

How many systems hold your plant's data?

A	B	C	D
1–5	6–10	10+	Lost count

MOVE 01 · CONNECT

15+ systems. One live view.

PLANT VIEW · LIVE — ALL ON ONE SCREEN

ERP	Business software	CONNECTED
MC	Machine controls	CONNECTED
LAB	Lab test results	CONNECTED
EM	Energy meters	CONNECTED
WHR	Waste-heat recovery	CONNECTED
LOG	Paper logbooks	DIGITISED

MOVE 02 · DECIDE

5× faster decisions.

TIME TO GET THE NUMBERS YOU NEED

Before — Hours

Now — Minutes

14

dashboards on the same live data

- ✓ Control room
- ✓ Plant head
- ✓ One shared set of numbers

MOVE 03 · OPTIMISE

15% less energy used.*

AI found the most efficient operating range for the kiln and the grinding mill, so each tonne of cement now takes **15% less energy.**

*Specific energy consumption (SEC): energy used per tonne of cement.

THREE MOVES, ONE PATH

Each move builds on the last, from seeing to self-optimising.

STEP 1
